Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	INTERNATIONAL STANDARDS AND RECOMMENDED PRACTICES CHAPTER 1. DEFINITIONS <i>Note 1.— All references to “Radio Regulations” are to the Radio Regulations published by the International Telecommunication Union (ITU). Radio Regulations are amended from time to time by the decisions embodied in the Final Acts of World Radiocommunication Conferences held normally every two to three years. Further information on the ITU processes as they relate to aeronautical radio system frequency use is contained in the Handbook on Radio Frequency Spectrum Requirements for Civil Aviation including statement of approved ICAO policies (Doc 9718).</i> <i>Note 2.— The Mode S extended squitter system is subject to patent rights from the Massachusetts Institute of Technology (MIT) Lincoln Laboratory. On 22 August 1996, MIT Lincoln Laboratory issued a notice in the Commerce Business Daily (CBD), a United States Government publication, of its intent not to assert its rights as patent owner against any and all persons in the commercial or non-commercial practice of the patent, in order to promote the widest possible use of the Mode S extended squitter technology. Further, by letter to ICAO dated 27 August 1998, MIT Lincoln Laboratory confirmed that the CBD notice has been provided to satisfy ICAO requirements for a statement of patent rights for techniques that are included in SARPs, and that the patent holders offer this technique free of charge for any use.</i>	Civil Aviation Rule (CAR) 171.53(a)(1).	No Difference		Note: any definition not otherwise referenced is deemed to be incorporated by reference (IBR) in CAR 171.53(a)(1). Civil Aviation rules and ACs are available on the CAANZ website, www.caa.govt.nz .

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
	Airborne collision avoidance system (ACAS). An aircraft system based on secondary surveillance radar (SSR) transponder signals which operates independently of ground-based equipment to provide advice to the pilot on potential conflicting aircraft that are equipped with SSR transponders. <i>Note.— SSR transponders referred to above are those operating in Mode C or Mode S.</i>				
Chapter 1 Reference	Aircraft address. A unique combination of twenty-four bits available for assignment to an aircraft for the purpose of air-ground communications, navigation and surveillance. <i>Note.— SSR Mode S transponders transmit extended squitters to support the broadcast of aircraft-derived position for surveillance purposes. The broadcast of this type of information is a form of automatic dependent surveillance (ADS) known as ADS-broadcast (ADS-B).</i>	CAR 171.53(a)(1).	No Difference		IBR.
Chapter 1 Reference	Automatic dependent surveillance-broadcast (ADS-B) OUT. A function on an aircraft or vehicle that periodically broadcasts its state vector (position and velocity) and other information derived from on-board systems in a format suitable for ADS-B IN capable receivers.	CAR 171.53(a)(1).	No Difference		IBR.
Chapter 1 Reference	Automatic dependent surveillance-broadcast (ADS-B) IN. A function that receives surveillance data from ADS-B OUT data sources.	CAR 171.53(a)(1).	No Difference		CAR 171.53(a)(1).

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	<i>Collision avoidance logic.</i> The sub-system or part of ACAS that analyses data relating to an intruder and own aircraft, decides whether or not advisories are appropriate and, if so, generates the advisories. It includes the following functions: range and altitude tracking, threat detection and RA generation. It excludes surveillance.	CAR 171.53(a)(1).	No Difference		IBR.
Chapter 1 Reference Definition	<i>Human Factors principles.</i> Principles which apply to design, certification, training, operations and maintenance and which seek safe interface between the human and other system components by proper consideration to human performance.	CAR 171.53(a)(1).	No Difference		IBR.
Chapter 1 Reference Definition	<i>Secondary surveillance radar (SSR).</i> A surveillance radar system which uses transmitters/receivers (interrogators) and transponders. <i>Note.— The requirements for interrogators and transponders are specified in Chapter 3.</i>	AIPNZ GEN 2.2, Definitions.	No Difference		Note: listed under "Radar".
Chapter 1 Reference Definition	<i>Surveillance radar.</i> Radar equipment used to determine the position of an aircraft in range and azimuth.	AIPNZ GEN 2.2, Definitions.	No Difference		Note: listed under "Radar".
Chapter 1 Reference Definition	<i>Traffic information service – broadcast (TIS-B) IN.</i> A surveillance function that receives and processes surveillance data from TIS-B OUT data sources.	CAR 171.53(a)(1).	No Difference		IBR.

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 1 Reference Definition	Traffic information service – broadcast (TIS-B) OUT. A function on the ground that periodically broadcasts the surveillance information made available by ground sensors in a format suitable for TIS-B IN capable receivers. <i>Note.— This technique can be achieved through different data links. The requirements for Mode S extended squitters are specified in Annex 10, Volume IV, Chapter 5. The requirements for VHF digital link (VDL) Mode 4 and universal access transceiver (UAT) are specified in Annex 10, Volume III, Part I.</i>	CAR 171.53(a)(1).	No Difference		IBR.
Chapter 1 Reference Definition	Transponder occupancy. A state of unavailability of the transponder from the time it detects an incoming signal that appears to cause some action or from the time of a self-initiated transmission, to the time that it is capable of replying to another interrogation. <i>Note.— Signals from various systems that contribute to transponder occupancy are described in the Aeronautical Surveillance Manual (Doc 9924), Appendix M.</i>	CAR 171.53(a)(1).	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 2 Reference 2.1.1 Standard	CHAPTER 2. GENERAL 2.1 SECONDARY SURVEILLANCE RADAR (SSR) 2.1.1 When SSR is installed and maintained in operation as an aid to air traffic services, it shall conform with the provisions of 3.1 unless otherwise specified in this 2.1. <i>Note.— As referred to in this Annex, Mode A/C transponders are those which conform to the characteristics prescribed in 3.1.1. Mode S transponders are those which conform to the characteristics prescribed in 3.1.2. The functional capabilities of Mode A/C transponders are an integral part of those of Mode S transponders.</i>	CAR 171.53(a)(1).	No Difference		The rule incorporates the relevant SARPs by reference.

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 2 Reference 2.1.2.1 Standard	2.1.2 Interrogation modes (ground-to-air) 2.1.2.1 Interrogation for air traffic services shall be performed on the modes described in 3.1.1.4.3 or 3.1.2. The uses of each mode shall be as follows: 1) <i>Mode A</i> — to elicit transponder replies for identity and surveillance. 2) <i>Mode C</i> — to elicit transponder replies for automatic pressure-altitude transmission and surveillance. 3) <i>Intermode</i> — a) <i>Mode A/C/S all-call</i>: to elicit replies for surveillance of Mode A/C transponders and for the acquisition of Mode S transponders. b) <i>Mode A/C-only all-call</i>: to elicit replies for surveillance of Mode A/C transponders. Mode S transponders do not reply. 4) <i>Mode S</i> — a) <i>Mode S-only all-call</i>: to elicit replies for acquisition of Mode S transponders. b) <i>Broadcast</i>: to transmit information to all Mode S transponders. No replies are elicited. c) <i>Selective</i>: for surveillance of, and communication with, individual Mode S transponders. For each interrogation, a reply is elicited only from the transponder uniquely addressed by the interrogation. <i>Note 1.— Mode A/C transponders are suppressed by Mode S interrogations and do not reply.</i>	CAR 171.53(a)(1).	No Difference

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
	<i>Note 2.— There are 25 possible interrogation (uplink) formats and 25 possible Mode S reply (downlink) formats. For format assignment see 3.1.2.3.2, Figures 3-7 and 3-8.</i>				
Chapter 2 Reference 2.1.2.1.1 Recommendation	2.1.2.1.1 Recommendation. — <i>Administrations should coordinate with appropriate national and international authorities those implementation aspects of the SSR system which will permit its optimum use.</i> <i>Note.— In order to permit the efficient operation of ground equipment designed to eliminate interference from unwanted aircraft transponder replies to adjacent interrogators (defruiting equipment), States may need to develop coordinated plans for the assignment of pulse recurrence frequencies (PRF) to SSR interrogators.</i>	Doc 9673 Vol II, Part V Appendix; MATS RAC 6.	No Difference		
Chapter 2 Reference 2.1.2.1.2 Standard	2.1.2.1.2 The assignment of interrogator identifier (II) codes, where necessary in areas of overlapping coverage, across international boundaries of flight information regions, shall be the subject of regional air navigation agreements.	Doc 9673 Vol II, Part V Appendix; MATS RAC 6.	No Difference		
Chapter 2 Reference 2.1.2.1.3 Standard	2.1.2.1.3 The assignment of surveillance identifier (SI) codes, where necessary in areas of overlapping coverage, shall be the subject of regional air navigation agreements. <i>Note.— The SI lockout facility cannot be used unless all Mode S transponders within coverage range are equipped for this purpose.</i>	Doc 9673 Vol II, Part V Appendix; MATS RAC 6.	No Difference		
Chapter 2 Reference 2.1.2.2 Standard	2.1.2.2 Mode A and Mode C interrogations shall be provided. <i>Note.— This requirement may be satisfied by intermode interrogations which elicit Mode A and Mode C replies from Mode A/C transponders.</i>	CAR 171.53(a)(1).	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 2 Reference 2.1.2.3 Recommendation	2.1.2.3 Recommendation. — <i>In areas where improved aircraft identification is necessary to enhance the effectiveness of the ATC system, SSR ground facilities having Mode S features should include aircraft identification capability.</i> <i>Note.</i> — <i>Aircraft identification reporting through the Mode S data link provides unambiguous identification of aircraft suitably equipped.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 2 Reference 2.1.2.4.1 Standard	2.1.2.4 Side-lobe suppression control interrogation 2.1.2.4.1 Side-lobe suppression shall be provided in accordance with the provisions of 3.1.1.4 and 3.1.1.5 on all Mode A, Mode C and intermode interrogations.	CAR 171.53(a)(1).	No Difference		
Chapter 2 Reference 2.1.2.4.2 Standard	2.1.2.4.2 Side-lobe suppression shall be provided in accordance with the provisions of 3.1.2.1.5.2.1 on all Mode S-only all-call interrogations.	CAR 171.53(a)(1).	No Difference		
Chapter 2 Reference 2.1.3.1 Standard	2.1.3 Transponder reply modes (air-to-ground) 2.1.3.1 Transponders shall respond to Mode A interrogations in accordance with the provisions of 3.1.1.7.12.1 and to Mode C interrogations in accordance with the provisions of 3.1.1.7.12.2. <i>Note.</i> — <i>If pressure-altitude information is not available, transponders reply to Mode C interrogations with framing pulses only.</i>	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 2 Reference 2.1.3.1.1 Standard	2.1.3.1.1 The pressure-altitude reports contained in Mode S replies shall be derived as specified in 3.1.1.7.12.2. <i>Note.— 3.1.1.7.12.2 is intended to relate to Mode C replies and specifies, inter alia, that Mode C pressure-altitude reports be referenced to a standard pressure setting of 1 013.25 hectopascals. The intention of 2.1.3.1.1 is to ensure that all transponders, not just Mode C transponders, report uncorrected pressure-altitude.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 2 Reference 2.1.3.2 Standard	2.1.3.2 Where the need for Mode C automatic pressure-altitude transmission capability within a specified airspace has been determined, transponders, when used within the airspace concerned, shall respond to Mode C interrogations with pressure-altitude encoding in the information pulses.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 2 Reference 2.1.3.2.1 Standard	2.1.3.2.1 From 1 January 1999, all transponders, regardless of the airspace in which they will be used, shall respond to Mode C interrogations with pressure-altitude information. <i>Note.— Operation of the airborne collision avoidance system (ACAS) depends upon intruder aircraft reporting pressure-altitude in Mode C replies.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 2 Reference 2.1.3.2.2 Standard	2.1.3.2.2 For aircraft equipped with 7.62 m (25 ft) or better pressure-altitude sources, the pressure-altitude information provided by Mode S transponders in response to selective interrogations (i.e. in the AC field, 3.1.2.6.5.4) shall be reported in 7.62 m (25 ft) increments. <i>Note.— Performance of the ACAS is significantly enhanced when an intruder aircraft is reporting pressure-altitude in 7.62 m (25 ft) increments.</i>	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 2 Reference 2.1.3.2.3 Standard	2.1.3.2.3 All Mode A/C transponders shall report pressure-altitude encoded in the information pulses in Mode C replies.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 2 Reference 2.1.3.2.4 Standard	2.1.3.2.4 All Mode S transponders shall report pressure-altitude encoded in the information pulses in Mode C replies and in the AC field of Mode S replies.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 2 Reference 2.1.3.2.5 Standard	2.1.3.2.5 When a Mode S transponder is not receiving more pressure-altitude information from a source with a quantization of 7.62 m (25 ft) or better increments, the reported value of the altitude shall be the value obtained by expressing the measured value of the uncorrected pressure-altitude of the aircraft in 30.48 m (100 ft) increments and the Q bit (see 3.1.2.6.5.4 b)) shall be set to 0. <i>Note.— This requirement relates to the installation and use of the Mode S transponder. The purpose is to ensure that altitude data obtained from a 30.48 m (100 ft) increment source are not reported using the formats intended for 7.62 m (25 ft) data.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 2 Reference 2.1.3.3 Standard	2.1.3.3 Transponders used within airspace where the need for Mode S airborne capability has been determined shall also respond to intermode and Mode S interrogations in accordance with the applicable provisions of 3.1.2.	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 2 Reference 2.1.5.1.1 Standard	2.1.5.1.1 Level 1 — Level 1 transponders shall have the capabilities prescribed for: a) Mode A identity and Mode C pressure-altitude reporting (3.1.1); b) intermode and Mode S all-call transactions (3.1.2.5); c) addressed surveillance altitude and identity transaction (3.1.2.6.1, 3.1.2.6.3, 3.1.2.6.5 and 3.1.2.6.7); d) lockout protocols (3.1.2.6.9); e) basic data protocols except data link capability reporting (3.1.2.6.10); and f) air-air service and squitter transactions (3.1.2.8). <i>Note.— Level 1 permits SSR surveillance based on pressure-altitude reporting and the Mode A identity code. In an SSR Mode S environment, technical performance relative to a Mode A/C transponder is improved due to Mode S selective aircraft interrogation.</i>	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 2 Reference 2.1.5.1.2 Standard	2.1.5.1.2 Level 2 — Level 2 transponders shall have the capabilities of 2.1.5.1.1 and also those prescribed for: a) standard length communications (Comm-A and Comm-B) (3.1.2.6.2, 3.1.2.6.4, 3.1.2.6.6, 3.1.2.6.8 and 3.1.2.6.11); b) data link capability reporting (3.1.2.6.10.2.2); c) aircraft identification reporting (3.1.2.9); and d) data parity with overlay control (3.1.2.6.11.2.5) for equipment certified on or after 1 January 2020. <i>Note.— Level 2 permits aircraft identification reporting and other standard length data link communications from ground to air and air to ground. The aircraft identification reporting capability requires an interface and appropriate input device.</i>	CAR Part 91 Appendix A, A.22.	No Difference		Note: compliance with (d) yet to be considered.
Chapter 2 Reference 2.1.5.1.3 Standard	2.1.5.1.3 Level 3 — Level 3 transponders shall have the capabilities of 2.1.5.1.2 and also those prescribed for ground-to-air extended length message (ELM) communications (3.1.2.7.1 to 3.1.2.7.5). <i>Note.— Level 3 permits extended length data link communications from ground to air and thus may provide retrieval from ground-based data banks and receipt of other air traffic services which are not available with Level 2 transponders.</i>	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 2 Reference 2.1.5.1.4 Standard	2.1.5.1.4 Level 4 — Level 4 transponders shall have the capabilities of 2.1.5.1.3 and also those prescribed for air-to-ground extended length message (ELM) communications (3.1.2.7.7 and 3.1.2.7.8). <i>Note.— Level 4 permits extended length data link communications from air to ground and thus may provide access from the ground to airborne data sources and the transmission of other data required by air traffic services which are not available with Level 2 transponders.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 2 Reference 2.1.5.1.5 Standard	2.1.5.1.5 Level 5 — Level 5 transponders shall have the capabilities of 2.1.5.1.4 and also those prescribed for enhanced Comm-B and extended length message (ELM) communications (3.1.2.6.11.3.4, 3.1.2.7.6 and 3.1.2.7.9). <i>Note.— Level 5 permits Comm-B and extended length data link communications with multiple interrogators without requiring the use of multisite reservations. This level of transponder has a higher minimum data link capacity than the other transponder levels.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 2 Reference 2.1.5.1.6 Standard	2.1.5.1.6 <i>Extended squitter</i> — Extended squitter transponders shall have the capabilities of 2.1.5.1.2, 2.1.5.1.3, 2.1.5.1.4 or 2.1.5.1.5, the capabilities prescribed for extended squitter operation (3.1.2.8.6) and the capabilities prescribed for ACAS cross-link operation (3.1.2.8.3 and 3.1.2.8.4). Transponders with these capabilities shall be designated with a suffix “e”. <i>Note.— For example, a level 4 transponder with extended squitter capability would be designated “level 4e”.</i>	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 2 Reference 2.1.5.1.7 Standard	2.1.5.1.7 <i>SI capability</i> — Transponders with the ability to process SI codes shall have the capabilities of 2.1.5.1.1, 2.1.5.1.2, 2.1.5.1.3, 2.1.5.1.4 or 2.1.5.1.5 and also those prescribed for SI code operation (3.1.2.3.2.1.4, 3.1.2.5.2.1, 3.1.2.6.1.3, 3.1.2.6.1.4.1, 3.1.2.6.9.1.1 and 3.1.2.6.9.2). Transponders with this capability shall be designated with a suffix “s”. <i>Note.— For example, a level 4 transponder with extended squitter capability and SI capability would be designated “level 4es”.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 2 Reference 2.1.5.1.7.1 Standard	2.1.5.1.7.1 SI code capability shall be provided in accordance with the provisions of 2.1.5.1.7 for all Mode S transponders installed on or after 1 January 2003 and by all Mode S transponders by 1 January 2005. <i>Note.— Mandates from certain States may require applicability in advance of these dates.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 2 Reference 2.1.5.1.8 Standard	2.1.5.1.8 <i>Extended squitter non-transponder devices.</i> Devices that are capable of broadcasting extended squitters that are not part of a Mode S transponder shall conform to all of the 1 090 MHz RF signals in space requirements specified for a Mode S transponder, except for transmit power levels for the identified equipment class as specified in 5.1.1.	CAR Part 91 Appendix A, A.22; CAR 171.53(a)(1).	No Difference

Chapter 2 Reference 2.1.5.2 Standard	2.1.5.2 All Mode S transponders used by international civil air traffic shall conform, at least, to the requirements of Level 2 prescribed in 2.1.5.1.2. <i>Note 1.— Level 1 may be admitted for use within an individual State or within the terms of a regional air navigation agreement. The Mode S Level 1 transponder comprises the minimum set of features for compatible operation of Mode S transponders with SSR Mode S interrogators. It is defined to prevent a proliferation of transponder types below Level 2 which would be incompatible with SSR Mode S interrogators.</i> <i>Note 2.— The intent of the requirement for a Level 2 capability is to ensure the widespread use of an ICAO standard transponder capability to allow worldwide planning of Mode S ground facilities and services. The requirement also discourages an initial installation with Level 1 transponders that would be rendered obsolete by later requirements in certain airspace for mandatory carriage of transponders having Level 2 capabilities.</i>	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.1.7.9.1 Standard	3.1.1.7.9 <i>Reply rate</i> 3.1.1.7.9.1 All transponders shall be capable of continuously generating at least 500 replies per second for a 15-pulse coded reply. Transponder installations used solely below 4 500 m (15 000 ft), or below a lesser altitude established by the appropriate authority or by regional air navigation agreement, and in aircraft with a maximum cruising true airspeed not exceeding 175 kt (324 km/h) shall be capable of generating at least 1 000 15-pulse coded replies per second for a duration of 100 milliseconds. Transponder installations operated above 4 500 m (15 000 ft) or in aircraft with a maximum cruising true airspeed in excess of 175 kt (324 km/h), shall be capable of generating at least 1 200 15-pulse coded replies per second for a duration of 100 milliseconds. <i>Note 1.— A 15-pulse reply includes 2 framing pulses, 12 information pulses, and the SPI pulse.</i> <i>Note 2.— The reply rate requirement of 500 replies per second establishes the minimum continuous reply rate capability of the transponder. As per the altitude and speed criteria above, the 100 or 120 replies in a 100-millisecond interval defines the peak capability of the transponder. The transponder must be capable of replying to this short-term burst rate, even though the transponder may not be capable of sustaining this rate. If the transponder is subjected to interrogation rates beyond its reply rate capability, the reply rate limit control of 3.1.1.7.9.2 acts to gracefully desensitize the transponder in a manner that favours closer interrogators. Desensitization eliminates weaker interrogation signals.</i>	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.1.7.9.2 Standard	3.1.1.7.9.2 <i>Reply rate limit control.</i> To protect the system from the effects of transponder over-interrogation by preventing response to weaker signals when a predetermined reply rate has been reached, a sensitivity reduction type reply limit control shall be incorporated in the equipment. The range of this control shall permit adjustment, as a minimum, to any value between 500 and 2 000 replies per second, or to the maximum reply rate capability if less than 2 000 replies per second, without regard to the number of pulses in each reply. Sensitivity reduction in excess of 3 dB shall not take effect until 90 per cent of the selected value is exceeded. Sensitivity reduction shall be at least 30 dB for rates in excess of 150 per cent of the selected value.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.1.7.10 Standard	3.1.1.7.10 <i>Reply delay and jitter.</i> The time delay between the arrival, at the transponder receiver, of the leading edge of <i>P3</i> and the transmission of the leading edge of the first pulse of the reply shall be 3 plus or minus 0.5 microseconds. The total jitter of the reply pulse code group, with respect to <i>P3</i> , shall not exceed 0.1 microsecond for receiver input levels between 3 dB and 50 dB above minimum triggering level. Delay variations between modes on which the transponder is capable of replying shall not exceed 0.2 microsecond.	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.1.7.11.1 Standard	3.1.1.7.11 <i>Transponder power output and duty cycle</i> 3.1.1.7.11.1 The peak pulse power available at the antenna end of the transmission line of the transponder shall be at least 21 dB and not more than 27 dB above 1 W, except that for transponder installations used solely below 4 500 m (15 000 ft), or below a lesser altitude established by the appropriate authority or by regional air navigation agreement, a peak pulse power available at the antenna end of the transmission line of the transponder of at least 18.5 dB and not more than 27 dB above 1 W shall be permitted. <i>Note.— An extended squitter non-transponder device on an aerodrome surface vehicle may operate with a lower minimum power output as specified in 5.1.1.2.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.1.7.11.2 Recommendation	3.1.1.7.11.2 Recommendation.— <i>The peak pulse power specified in 3.1.1.7.11.1 should be maintained over a range of replies from code 0000 at a rate of 400 replies per second to a maximum pulse content at a rate of 1 200 replies per second or a maximum value below 1 200 replies per second of which the transponder is capable.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.1.7.12.1 Standard	3.1.1.7.12 <i>Reply codes</i> 3.1.1.7.12.1 <i>Identification.</i> The reply to a Mode A interrogation shall consist of the two framing pulses specified in 3.1.1.6.1 together with the information pulses (Mode A code) specified in 3.1.1.6.2. <i>Note.— The Mode A code designation is a sequence of four digits in accordance with 3.1.1.6.6.</i>	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.1.7.12.1.1 Standard	3.1.1.7.12.1.1 The Mode A code shall be manually selected from the 4 096 codes available.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.1.7.12.2 Standard	3.1.1.7.12.2 <i>Pressure-altitude transmission.</i> The reply to Mode C interrogation shall consist of the two framing pulses specified in 3.1.1.6.1 above. When digitized pressure-altitude information is available, the information pulses specified in 3.1.1.6.2 shall also be transmitted.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.1.7.12.2.1 Standard	3.1.1.7.12.2.1 Transponders shall be provided with means to remove the information pulses but to retain the framing pulses when the provision of 3.1.1.7.12.2.4 below is not complied with in reply to Mode C interrogation.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.1.7.12.2.2 Standard	3.1.1.7.12.2.2 The information pulses shall be automatically selected by an analog-to-digital converter connected to a pressure-altitude data source in the aircraft referenced to the standard pressure setting of 1 013.25 hectopascals. <i>Note.— The pressure setting of 1 013.25 hectopascals is equal to 29.92 inches of mercury.</i>	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.1.7.12.2.3 Standard	3.1.1.7.12.2.3 Pressure-altitude shall be reported in 100-ft increments by selection of pulses as shown in the Appendix to this chapter.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.1.7.12.2.4 Standard	3.1.1.7.12.2.4 The digitizer code selected shall correspond to within plus or minus 38.1 m (125 ft), on a 95 per cent probability basis, with the pressure-altitude information (referenced to the standard pressure setting of 1 013.25 hectopascals), used on board the aircraft to adhere to the assigned flight profile.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.1.7.13 Standard	3.1.1.7.13 <i>Transmission of the special position identification (SPI) pulse.</i> When required, this pulse shall be transmitted with Mode A replies, as specified in 3.1.1.6.3, for a period of between 15 and 30 seconds.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.1.7.14.1 Standard	3.1.1.7.14 <i>Antenna</i> 3.1.1.7.14.1 The transponder antenna system, when installed on an aircraft, shall have a radiation pattern which is essentially omnidirectional in the horizontal plane.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.1.7.14.2 Recommendation	3.1.1.7.14.2 Recommendation. — <i>The vertical radiation pattern should be nominally equivalent to that of a quarter-wave monopole on a ground plane.</i>	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.1.8.1 Standard	3.1.1.8 Technical characteristics of ground interrogators with Mode A and Mode C capabilities only 3.1.1.8.1 <i>Interrogation repetition frequency.</i> The maximum interrogation repetition frequency shall be 450 interrogations per second.	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.1.8.1.1 Recommendation	3.1.1.8.1.1 Recommendation. — <i>To minimize unnecessary transponder triggering and the resulting high density of mutual interference, all interrogators should use the lowest practicable interrogator repetition frequency that is consistent with the display characteristics, interrogator antenna beam width and antenna rotation speed employed.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.1.8.2 Recommendation	3.1.1.8.2 <i>Radiated power</i> Recommendation. — <i>In order to minimize system interference the effective radiated power of interrogators should be reduced to the lowest value consistent with the operationally required range of each individual interrogator site.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.1.8.3 Recommendation	3.1.1.8.3 Recommendation. — <i>When Mode C information is to be used from aircraft flying below transition levels, the altimeter pressure reference datum should be taken into account.</i> <i>Note.</i> — <i>Use of Mode C below transition levels is in accordance with the philosophy that Mode C can usefully be employed in all environments.</i>	CAR 171.53(a)(1).	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.1.9.1 Recommendation	3.1.1.9 Interrogator radiated field pattern Recommendation. — <i>The beam width of the directional interrogator antenna radiating P3 should not be wider than is operationally required. The side- and back-lobe radiation of the directional antenna should be at least 24 dB below the peak of the main-lobe radiation.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.1.10.1 Standard	3.1.1.10 Interrogator monitor 3.1.1.10.1 The range and azimuth accuracy of the ground interrogator shall be monitored at sufficiently frequent intervals to ensure system integrity. <i>Note.</i> — <i>Interrogators that are associated with and operated in conjunction with primary radar may use the primary radar as the monitoring device; alternatively, an electronic range and azimuth accuracy monitor would be required.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.1.10.2 Recommendation	3.1.1.10.2 Recommendation. — <i>In addition to range and azimuth monitoring, provision should be made to monitor continuously the other critical parameters of the ground interrogator for any degradation of performance exceeding the allowable system tolerances and to provide an indication of any such occurrence.</i>	CAR 171.53(a)(1).	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.1.11.1 Recommendation	3.1.1.11 Spurious emissions and spurious responses 3.1.1.11.1 <i>Spurious radiation</i> Recommendation. — <i>CW radiation should not exceed 76 dB below 1 W for the interrogator and 70 dB below 1 W for the transponder.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.1.11.2 Recommendation	3.1.1.11.2 <i>Spurious responses</i> Recommendation. — <i>The response of both airborne and ground equipment to signals not within the receiver pass band should be at least 60 dB below normal sensitivity.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.1 Standard	3.1.2 Systems having Mode S capabilities 3.1.2.1 <i>Interrogation signals-in-space characteristics.</i> The paragraphs herein describe the signals-in-space as they can be expected to appear at the antenna of the transponder. <i>Note.</i> — <i>Because signals can be corrupted in propagation, certain interrogation pulse duration, pulse spacing and pulse amplitude tolerances are more stringent for interrogators as described in 3.1.2.11.4.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.1.1 Standard	3.1.2.1.1 <i>Interrogation carrier frequency.</i> The carrier frequency of all interrogations (uplink transmissions) from ground facilities with Mode S capabilities shall be 1 030 plus or minus 0.01 MHz, except during the phase reversal, while maintaining the spectrum requirements of 3.1.2.1.2. <i>Note.</i> — <i>During the phase reversal the frequency of the signal may shift by several MHz before returning to the specified value.</i>	CAR 171.53(a)(1).	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.1.2 Standard	3.1.2.1.2 <i>Interrogation spectrum.</i> The spectrum of a Mode S interrogation about the carrier frequency shall not exceed the limits specified in Figure 3-2. <i>Note.— The Mode S interrogation spectrum is data dependent. The broadest spectrum is generated by an interrogation that contains all binary ONES.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.1.3 Standard	3.1.2.1.3 <i>Polarization.</i> Polarization of the interrogation and control transmissions shall be nominally vertical.	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.1.4 Standard	3.1.2.1.4 <i>Modulation.</i> For Mode S interrogations, the carrier frequency shall be pulse modulated. In addition, the data pulse, <i>P6</i> , shall have internal phase modulation.	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.1.4.1 Standard	3.1.2.1.4.1 <i>Pulse modulation.</i> Intermode and Mode S interrogations shall consist of a sequence of pulses as specified in 3.1.2.1.5 and Tables 3-1, 3-2, 3-3, and 3-4. <i>Note.— The 0.8 microsecond pulses used in intermode and Mode S interrogations are identical in shape to those used in Modes A and C as defined in 3.1.1.4.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.1.4.2 Standard	3.1.2.1.4.2 <i>Phase modulation.</i> The short (16.25-microsecond) and long (30.25-microsecond) <i>P6</i> pulses of 3.1.2.1.4.1 shall have internal binary differential phase modulation consisting of 180-degree phase reversals of the carrier at a 4 megabit per second rate.	CAR 171.53(a)(1).	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.1.4.2.1 Standard	3.1.2.1.4.2.1 <i>Phase reversal duration.</i> The duration of the phase reversal shall be less than 0.08 microsecond and the phase shall advance (or retard) monotonically throughout the transition region. There shall be no amplitude modulation applied during the phase transition. <i>Note 1.— The minimum duration of the phase reversal is not specified. Nonetheless, the spectrum requirements of 3.1.2.1.2 must be met.</i> <i>Note 2.— The phase reversal can be generated using different methods. This includes hard keying with strong amplitude drop and rapid phase reversal or other techniques with little or no amplitude drop, but with frequency shift during the phase reversal and slow phase reversal (80ns). A demodulator cannot make any assumption on the type of modulation technology used and therefore cannot rely on the specificities of the signal during the phase reversal to detect a phase reversal.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.1.4.2.2 Standard	3.1.2.1.4.2.2 <i>Phase relationship.</i> The tolerance on the 0 and 180-degree phase relationship between successive chips and on the sync phase reversal (3.1.2.1.5.2.2) within the P6 pulse shall be plus or minus 5 degrees. <i>Note.— In Mode S a “chip” is the 0.25 microsecond carrier interval between possible data phase reversals.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.1.5 Standard	3.1.2.1.5 <i>Pulse and phase reversal sequences.</i> Specific sequences of the pulses or phase reversals described in 3.1.2.1.4 shall constitute interrogations.	CAR 171.53(a)(1).	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.1.5.1.1 Standard	3.1.2.1.5.1 <i>Intermode interrogation</i> 3.1.2.1.5.1.1 <i>Mode A/C/S all-call interrogation.</i> This interrogation shall consist of three pulses: <i>P1</i>, <i>P3</i>, and the long <i>P4</i> as shown in Figure 3-3. One or two control pulses (<i>P2</i> alone, or <i>P1</i> and <i>P2</i>) shall be transmitted using a separate antenna pattern to suppress responses from aircraft in the side lobes of the interrogator antenna. <i>Note.— The Mode A/C/S all-call interrogation elicits a Mode A or Mode C reply (depending on the P1-P3 pulse spacing) from a Mode A/C transponder because it does not recognize the P4 pulse. A Mode S transponder recognizes the long P4 pulse and responds with a Mode S reply. This interrogation was originally planned for use by isolated or clustered interrogators. Lockout for this interrogation was based on the use of II equals 0. The development of the Mode S subnetwork now dictates the use of a non-zero II code for communication purposes. For this reason, II equals 0 has been reserved for use in support of a form of Mode S acquisition that uses stochastic/lockout override (3.1.2.5.2.1.4 and 3.1.2.5.2.1.5). The Mode A/C/S all-call cannot be used with full Mode S operation since II equals 0 can only be locked out for short time periods (3.1.2.5.2.1.5.2.1). This interrogation cannot be used with stochastic/lockout override, since probability of reply cannot be specified.</i>	CAR 171.53(a)(1).	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.1.5.1.1.1 Standard	3.1.2.1.5.1.1.1 Mode A/C/S all-call interrogations shall not be used on or after 1 January 2020. <i>Note 1.— The use of Mode A/C/S all-call interrogations does not allow the use of stochastic lockout override and therefore might not ensure a good probability of acquisition in areas of high density of flights or when other interrogators lockout transponder on II=0 for supplementary acquisition.</i> <i>Note 2.— The replies to Mode A/C/S all-call interrogations will no longer be supported by equipment certified on or after 1 January 2020 in order to reduce the RF pollution generated by the replies triggered by the false detection of Mode A/C/S all-call interrogations within other types of interrogation.</i>	CAR 171.53(a)(1).	Less protective or partially implemented or not implemented	Yet to be addressed.	
Chapter 3 Reference 3.1.2.1.5.1.2 Standard	3.1.2.1.5.1.2 Mode A/C-only all-call interrogation. This interrogation shall be identical to that of the Mode A/C/S all-call interrogation except that the short P4 pulse shall be used. <i>Note.— The Mode A/C-only all-call interrogation elicits a Mode A or Mode C reply from a Mode A/C transponder. A Mode S transponder recognizes the short P4 pulse and does not reply to this interrogation.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.1.5.1.3 Standard	3.1.2.1.5.1.3 Pulse intervals. The pulse intervals between P1, P2 and P3 shall be as defined in 3.1.1.4.3 and 3.1.1.4.4. The pulse interval between P3 and P4 shall be 2 plus or minus 0.05 microsecond.	CAR 171.53(a)(1).	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.1.5.1.4 Standard	3.1.2.1.5.1.4 <i>Pulse amplitudes.</i> Relative amplitudes between pulses P1, P2 and P3 shall be in accordance with 3.1.1.5. The amplitude of P4 shall be within 1 dB of the amplitude of P3.	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.1.5.2 Standard	3.1.2.1.5.2 <i>Mode S interrogation.</i> The Mode S interrogation shall consist of three pulses: P1, P2 and P6 as shown in Figure 3-4. <i>Note.— P6 is preceded by a P1 – P2 pair which suppresses replies from Mode A/C transponders to avoid synchronous garble due to random triggering by the Mode S interrogation. The sync phase reversal within P6 is the timing mark for demodulation of a series of time intervals (chips) of 0.25 microsecond duration. This series of chips starts 0.5 microsecond after the sync phase reversal and ends 0.5 microsecond before the trailing edge of P6. A phase reversal may or may not precede each chip to encode its binary information value.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.1.5.2.1 Standard	3.1.2.1.5.2.1 <i>Mode S side-lobe suppression.</i> The P5 pulse shall be used with the Mode S-only all-call interrogation (UF = 11, see 3.1.2.5.2) to prevent replies from aircraft in the side and back lobes of the antenna (3.1.2.1.5.2.5). When used, P5 shall be transmitted using a separate antenna pattern. <i>Note 1.— The action of P5 is automatic. Its presence, if of sufficient amplitude at the receiving location, masks the sync phase reversal of P6.</i> <i>Note 2.— The P5 pulse may be used with other Mode S interrogations.</i>	CAR 171.53(a)(1).	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.1.5.2.2 Standard	3.1.2.1.5.2.2 <i>Sync phase reversal.</i> The first phase reversal in the <i>P6</i> pulse shall be the sync phase reversal. It shall be the timing reference for subsequent transponder operations related to the interrogation.	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.1.5.2.3 Standard	3.1.2.1.5.2.3 <i>Data phase reversals.</i> Each data phase reversal shall occur only at a time interval (N times 0.25) plus or minus 0.02 microsecond (N equal to, or greater than 2) after the sync phase reversal. The 16.25-microsecond <i>P6</i> pulse shall contain at most 56 data phase reversals. The 30.25-microsecond <i>P6</i> pulse shall contain at most 112 data phase reversals. The last chip, that is the 0.25-microsecond time interval following the last data phase reversal position, shall be followed by a 0.5-microsecond guard interval. <i>Note.— The 0.5-microsecond guard interval following the last chip prevents the trailing edge of P6 from interfering with the demodulation process.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.1.5.2.4 Standard	3.1.2.1.5.2.4 <i>Intervals.</i> The pulse interval between <i>P1</i> and <i>P2</i> shall be 2 plus or minus 0.05 microsecond. The interval between the leading edge of <i>P2</i> and the sync phase reversal of <i>P6</i> shall be 2.75 plus or minus 0.05 microsecond. The leading edge of <i>P6</i> shall occur 1.25 plus or minus 0.05 microsecond before the sync phase reversal. <i>P5</i> , if transmitted, shall be centred over the sync phase reversal; the leading edge of <i>P5</i> shall occur 0.4 plus or minus 0.05 microsecond before the sync phase reversal.	CAR 171.53(a)(1).	No Difference

Chapter 3 Reference 3.1.2.2.5.1.1 Standard	3.1.2.2.5.1.1 <i>Reply preamble.</i> The preamble shall consist of four pulses, each with a duration of 0.5 microsecond. The pulse intervals from the first transmitted pulse to the second, third and fourth transmitted pulses shall be 1, 3.5 and 4.5 microseconds, respectively.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.2.5.1.2 Standard	3.1.2.2.5.1.2 <i>Reply data pulses.</i> The reply data block shall begin 8 microseconds after the leading edge of the first transmitted pulse. Either 56 or 112 one-microsecond bit intervals shall be assigned to each transmission. A 0.5-microsecond pulse shall be transmitted either in the first or in the second half of each interval. When a pulse transmitted in the second half of one interval is followed by another pulse transmitted in the first half of the next interval, the two pulses merge and a one-microsecond pulse shall be transmitted.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.2.5.2 Standard	3.1.2.2.5.2 <i>Pulse amplitudes.</i> The pulse amplitude variation between one pulse and any other pulse in a Mode S reply shall not exceed 2 dB.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.3.1.1 Standard	3.1.2.3 Mode S data structure 3.1.2.3.1 <i>Data encoding</i> 3.1.2.3.1.1 <i>Interrogation data.</i> The interrogation data block shall consist of the sequence of 56 or 112 data chips positioned after the data phase reversals within P6 (3.1.2.1.5.2.3). A 180-degree carrier phase reversal preceding a chip shall characterize that chip as a binary ONE. The absence of a preceding phase reversal shall denote a binary ZERO.	CAR 171.53(a)(1).	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.3.1.2 Standard	3.1.2.3.1.2 <i>Reply data.</i> The reply data block shall consist of 56 or 112 data bits formed by binary pulse position modulation encoding of the reply data as described in 3.1.2.2.5.1.2. A pulse transmitted in the first half of the interval shall represent a binary ONE whereas a pulse transmitted in the second half shall represent a binary ZERO.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.3.1.3 Standard	3.1.2.3.1.3 <i>Bit numbering.</i> The bits shall be numbered in the order of their transmission, beginning with bit 1. Unless otherwise stated, numerical values encoded by groups (fields) of bits shall be encoded using positive binary notation and the first bit transmitted shall be the most significant bit (MSB). Information shall be coded in fields which consist of at least one bit. <i>Note.— In the description of Mode S formats the decimal equivalent of the binary code formed by the bit sequence within a field is used as the designator of the field function or command.</i>	CAR 171.53(a)(1); CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.3.2.1 Standard	3.1.2.3.2 <i>Formats of Mode S interrogations and replies</i> <i>Note.— A summary of all Mode S interrogation and reply formats is presented in Figures 3-7 and 3-8. A summary of all fields appearing in uplink and downlink formats is given in Table 3-3 and a summary of all subfields is given in Table 3-4.</i> 3.1.2.3.2.1 <i>Essential fields.</i> Every Mode S transmission shall contain two essential fields. One is a descriptor which shall uniquely define the format of the transmission. This shall appear at the beginning of the transmission for all formats. The descriptors are designated by the UF (uplink format) or DF (downlink format) fields. The second essential field shall be a 24-bit field appearing at the end of each transmission and shall contain parity information. In all uplink and in currently defined downlink formats parity information shall be overlaid either on the aircraft address (3.1.2.4.1.2.3.1) or on the interrogator identifier according to 3.1.2.3.3.2. The designators are AP (address/parity) or PI (parity/interrogator identifier). <i>Note.— The remaining coding space is used to transmit the mission fields. For specific functions, a specific set of mission fields is prescribed. Mode S mission fields have two-letter designators. Subfields may appear within mission fields. Mode S subfields are labelled with three-letter designators.</i>	CAR 171.53(a)(1); CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.3.2.1.1 Standard	3.1.2.3.2.1.1 <i>UF: Uplink format.</i> This uplink format field (5 bits long except in format 24 where it is 2 bits long) shall serve as the uplink format descriptor in all Mode S interrogations and shall be coded according to Figure 3-7.	CAR 171.53(a)(1); CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.3.3.1.1 Standard	3.1.2.3.3.1.1 <i>Parity check sequence.</i> A sequence of 24 parity check bits shall be generated by the rule described in 3.1.2.3.3.1.2 and shall be incorporated into the field formed by the last 24 bits of all Mode S transmissions. The 24 parity check bits shall be combined with either the address coding or the interrogator identifier coding as described in 3.1.2.3.3.2. The resulting combination then forms either the AP (address/parity, 3.1.2.3.2.1.3) field or the PI (parity/interrogator identifier, 3.1.2.3.2.1.4) field.	CAR 171.53(a)(1); CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.3.3.1.2 Standard	3.1.2.3.3.1.2 <i>Parity check sequence generation.</i> The sequence of 24 parity bits ($p_1, p_2, \dots, p_{24}$) shall be generated from the sequence of information bits ($m_1, m_2, \dots, m_k$) where k is 32 or 88 for short or long transmissions respectively. This shall be done by means of a code generated by the polynomial: $G(x) = 1 + x^3 + x^{10} + x^{12} + x^{13} + x^{14} + x^{15} + x^{16} + x^{17} + x^{18} + x^{19} + x^{20} + x^{21} + x^{22} + x^{23} + x^{24}$ When by the application of binary polynomial algebra, $x^{24} [M(x)]$ is divided by $G(x)$ where the information sequence $M(x)$ is: $m_k + m_{k-1}x + m_{k-2}x^2 + \dots + m_1x^{k-1}$ the result is a quotient and a remainder $R(x)$ of degree less than 24. The bit sequence formed by this remainder represents the parity check sequence. Parity bit p_i , for any i from 1 to 24, is the coefficient of x^{24-i} in $R(x)$. <i>Note.— The effect of multiplying $M(x)$ by x^{24} is to append 24 ZERO bits to the end of the sequence.</i>	CAR 171.53(a)(1); CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.3.3.2 Standard	3.1.2.3.3.2 <i>AP and PI field generation.</i> Different address parity sequences shall be used for the uplink and downlink. <i>Note.— The uplink sequence is appropriate for a transponder decoder implementation. The downlink sequence facilitates the use of error correction in downlink decoding.</i> The code used in uplink AP field generation shall be formed as specified below from either the aircraft address (3.1.2.4.1.2.3.1.1), the all-call address (3.1.2.4.1.2.3.1.2) or the broadcast address (3.1.2.4.1.2.3.1.3). The code used in downlink AP field generation shall be formed directly from the sequence of 24 Mode S address bits ($a_1, a_2, \dots, a_{24}$), where a_i is the i-th bit transmitted in the aircraft address (AA) field of an all-call reply (3.1.2.5.2.2.2). The code used in downlink PI field generation shall be formed by a sequence of 24 bits ($a_1, a_2, \dots, a_{24}$), where the first 17 bits are ZEROS, the next three bits are a replica of the code label (CL) field (3.1.2.5.2.1.3) and the last four bits are a replica of the interrogator code (IC) field (3.1.2.5.2.1.2). <i>Note.— The PI code is not used in uplink transmissions.</i> A modified sequence ($b_1, b_2, \dots, b_{24}$) shall be used for uplink AP field generation. Bit b_i is the coefficient of x^{48-i} in the polynomial $G(x)A(x)$, where: $A(x) = a_1x^{23} + a_2x^{22} + \dots + a_{24}$ and $G(x)$ is as defined in 3.1.2.3.3.1.2. In the aircraft address a_i shall be the i-th bit transmitted in the AA field of an all-call reply. In the all-call and broadcast addresses a_i shall equal 1 for all values of i.	CAR 171.53(a)(1); CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.6.5.4 Standard	3.1.2.6.5.4 <i>AC: Altitude code.</i> This 13-bit (20-32) field shall contain altitude coded as follows: a) Bit 26 is designated as the M bit, and shall be 0 if the altitude is reported in feet. M equals 1 shall be reserved to indicate that the altitude reporting is in metric units. b) If M equals 0, then bit 28 is designated as the Q bit. Q equals 0 shall be used to indicate that the altitude is reported in 100-foot increments. Q equals 1 shall be used to indicate that the altitude is reported in 25-foot increments. c) If the M bit (bit 26) and the Q bit (bit 28) equal 0, the altitude shall be coded according to the pattern for Mode C replies of 3.1.1.7.12.2.3. Starting with bit 20 the sequence shall be C1, A1, C2, A2, C4, A4, ZERO, B1, ZERO, B2, D2, B4, D4. d) If the M bit equals 0 and the Q bit equals 1, the 11-bit field represented by bits 20 to 25, 27 and 29 to 32 shall represent a binary coded field with a least significant bit (LSB) of 25 ft. The binary value of the positive decimal integer "N" shall be encoded to report pressure-altitude in the range $[(25 N - 1\ 000) \text{ plus or minus } 12.5 \text{ ft}]$. The coding of 3.1.2.6.5.4 c) shall be used to report pressure-altitude above 50 187.5 ft. <i>Note 1.— This coding method is only able to provide values between minus 1 000 ft and plus 50 175 ft.</i> <i>Note 2.— The most significant bit (MSB) of this field is bit 20 as required by 3.1.2.3.1.3.</i> e) If the M bit equals 1, the 12-bit field represented by	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.6.9.1.1 Standard	3.1.2.6.9 <i>Lockout protocols</i> <i>Note.— Non-selective all-call lockout and multisite lockout are not mutually exclusive. Interrogators using multisite lockout protocols for interrogator networking coordination may use non-selective lockout commands in the same interrogation. For example, the non-selective lockout may be used to prevent Mode S transponder replies with DF=11 to wrongly detected Mode A/C/S all-call interrogations from Mode A/C-only all-call interrogations. This is because of the misinterpretation of the narrow P4 pulse as a wide P4 pulse.</i> 3.1.2.6.9.1 <i>Multisite all-call lockout</i> <i>Note.— The multisite lockout protocol prevents transponder acquisition from being denied one ground station by lockout commands from an adjacent ground station that has overlapping coverage.</i> 3.1.2.6.9.1.1 The multisite lockout command shall be transmitted in the SD field (3.1.2.6.1.4.1). A lockout command for an II code shall be transmitted in an SD with DI = 1 or DI = 7. An II lockout command shall be indicated by LOS code equals 1 and the presence of a non-zero interrogator identifier in the IIS subfield of SD. A lockout command for an SI code shall be transmitted in an SD with DI = 3. SI lockout shall be indicated by LSS equals 1 and the presence of a non-zero interrogator identifier in the SIS subfield of SD. After a transponder has accepted an interrogation containing a multisite lockout command, that transponder shall commence to lock out (i.e. not accept) any Mode S-only all-call interrogation which includes the identifier of the interrogator that commanded the lockout. The lockout shall persist for an interval <i>TL</i> (3.1.2.10.3.9) after the last acceptance of an interrogation containing the multisite lockout command. Multisite lockout shall not prevent acceptance of a Mode	CAR 171.53(a)(1); CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
	S-only all-call interrogation containing PR codes 8 to 12. If a lockout command (LOS = 1) is received together with IIS = 0, it shall be interpreted as a non-selective all-call lockout (3.1.2.6.9.2). <i>Note 1.— Fifteen interrogators can send independent multisite II lockout commands. In addition, 63 interrogators can send independent SI lockout commands. Each of these lockout commands must be timed separately.</i> <i>Note 2.— Multisite lockout (which only uses non-zero II codes) does not affect the response of the transponder to Mode S-only all-call interrogations containing II equals 0 or to Mode A/C/S all-call interrogations.</i>

Chapter 3 Reference 3.1.2.6.9.2 Standard	3.1.2.6.9.2 <i>Non-selective all-call lockout</i> <i>Note 1.— In cases where the multisite lockout protocol for II codes is not required (e.g. there is no overlapping coverage or there is ground station coordination via ground-to-ground communications) the non-selective lockout protocol may be used.</i> On acceptance of an interrogation containing code 1 in the PC field, a transponder shall commence to lock out (i.e. not accept) two types of all-call interrogations: a) the Mode S-only all-call (UF = 11), with II equals 0; and b) the Mode A/C/S all-call of 3.1.2.1.5.1.1. This lockout condition shall persist for an interval <i>TD</i> (3.1.2.10.3.9) after the last receipt of the command. Non-selective lockout shall not prevent acceptance of a Mode S-only all-call interrogation containing PR codes 8 to 12. <i>Note 2.— Non-selective lockout does not affect the response of the transponder to Mode S-only all-call interrogations containing II not equal to 0.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.6.10.1 Standard	3.1.2.6.10 <i>Basic data protocols</i> 3.1.2.6.10.1 <i>Flight status protocol.</i> Flight status shall be reported in the FS field (3.1.2.6.5.1).	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.6.10.1.1 Standard	3.1.2.6.10.1.1 <i>Alert.</i> An alert condition shall be reported in the FS field if the Mode A identity code transmitted in Mode A replies and in downlink formats DF equals 5 and DF equals 21 are changed by the pilot.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.6.10.1.1.1 Standard	3.1.2.6.10.1.1.1 <i>Permanent alert condition.</i> The alert condition shall be maintained if the Mode A identity code is changed to 7500, 7600 or 7700.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.6.10.1.1.2 Standard	3.1.2.6.10.1.1.2 <i>Temporary alert condition.</i> The alert condition shall be temporary and shall cancel itself after TC seconds if the Mode A identity code is changed to a value other than those listed in 3.1.2.6.10.1.1.1. The TC shall be retriggered and continued for TC seconds after any change has been accepted by the transponder function. <i>Note 1.— This retriggering is performed to ensure that the ground interrogator obtains the desired Mode A identity code before the alert condition is cleared.</i> <i>Note 2.— The value of TC is given in 3.1.2.10.3.9.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.6.10.1.1.3 Standard	3.1.2.6.10.1.1.3 <i>Termination of the permanent alert condition.</i> The permanent alert condition shall be terminated and replaced by a temporary alert condition when the Mode A identity code is set to a value other than 7500, 7600 or 7700.	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.6.10.1.2 Standard	3.1.2.6.10.1.2 <i>Ground report.</i> The on-the-ground status of the aircraft shall be reported in the CA field (3.1.2.5.2.2.1), the FS field (3.1.2.6.5.1), and the VS field (3.1.2.8.2.1). If an automatic indication of the on-the-ground condition (e.g., from a weight on wheels or strut switch) is available at the transponder data interface, it shall be used as the basis for the reporting of on-the-ground status except as specified in 3.1.2.6.10.3.1. If such indication is not available at the transponder data interface (3.1.2.10.5.1.3), the FS and VS codes shall indicate that the aircraft is airborne and the CA field shall indicate that the aircraft is either airborne or on the ground (CA = 6).	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.6.10.1.3 Standard	3.1.2.6.10.1.3 <i>Special position identification (SPI).</i> An equivalent of the SPI pulse shall be transmitted by Mode S transponders in the FS field and the surveillance status subfield (SSS) when manually activated. This pulse shall be transmitted for <i>TI</i> seconds after initiation (3.1.1.6.3, 3.1.1.7.13 and 3.1.2.8.6.3.1.1). <i>Note.— The value of TI is given in 3.1.2.10.3.9.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.6.10.2 Standard	3.1.2.6.10.2 <i>Capability reporting protocol.</i> The data structure and content of the data link capability report registers shall be implemented in such a way that interoperability is ensured. <i>Note 1.— Aircraft capability is reported in special fields as defined in the following paragraphs.</i> <i>Note 2.— The data format of the registers for reporting capability is specified in the Technical Provisions for Mode S Services and Extended Squitter (Doc 9871).</i>	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.6.10.2.2.2 Standard	3.1.2.6.10.2.2.2 <i>Updating of the data link capability report.</i> The transponder shall, at intervals not exceeding four seconds, compare the current data link capability status (bits 41-88 in the data link capability report) with that last reported and shall, if a difference is noted, initiate a revised data link capability report by Comm-B broadcast (3.1.2.6.11.4) for BDS1 = 1 (33-36) and BDS 2 = 0 (37-40). The transponder shall initiate, generate and announce the revised capability report even if the aircraft data link capability is degraded or lost. The transponder shall ensure that the BDS code is set for the data link capability report in all cases, including a loss of the interface. <i>Note.— The setting of the BDS code by the transponder ensures that a broadcast change of capability report will contain the BDS code for all cases of data link failure (e.g. the loss of the transponder data link interface).</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.6.10.2.2.3 Standard	3.1.2.6.10.2.2.3 <i>Zeroing of bits in the data link capability report</i> If capability information to the transponder fails to provide an update at a rate of at least once every 4 seconds, the transponder shall insert ZERO in bits 41 to 56 of the data link capability report (transponder register 1016). <i>Note.— Bits 1 to 8 contain the BDS1 and BDS2 codes. Bits 16 and 37 to 40 contain ACAS capability information. Bit 33 indicates the availability of aircraft identification data and is set by the transponder when the data comes from a separate interface and not from the ADLP. Bit 35 is the SI code indication. All of these bits are inserted by the transponder.</i>	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.6.10.3.1 Standard	3.1.2.6.10.3 <i>Validation of on-the-ground status declared by an automatic means</i> <i>Note.— For aircraft with an automatic means of determining vertical status, the CA field reports whether the aircraft is airborne or on the ground. ACAS II acquires aircraft using the short or extended squitter, both of which contain the CA field. If an aircraft reports on-the-ground status, that aircraft will not be interrogated by ACAS II in order to reduce unnecessary interrogation activity. If the aircraft is equipped to report extended squitter messages, the function that formats these messages may have information available to validate that an aircraft reporting “on-the-ground” is actually airborne.</i> 3.1.2.6.10.3.1 Aircraft with an automatic means for determining the on-the-ground state on which transponders have access to at least one of the parameters, ground speed, radio altitude or airspeed, shall perform the following validation check: If the automatically determined air/ground status is not available or is “airborne”, no validation shall be performed. If the automatically determined air/ground status is available and “on-the-ground” condition is being reported, the air/ground status shall be overridden and changed to “airborne” if: Ground Speed > 100 knots OR Airspeed > 100 knots OR Radio Altitude > 50 feet	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.6.11.1 Standard	3.1.2.6.11 <i>Standard length communications protocols</i> <i>Note 1.— The two types of standard length communications protocols are Comm-A and Comm-B; messages using these protocols are transferred under the control of the interrogator. Comm-A messages are sent directly to the transponder and are completed within one transaction. A Comm-B message is used to transfer information from air to ground and can be initiated either by the interrogator or the transponder. In the case of ground-initiated Comm-B transfers, the interrogator requests data to be read out from the transponder, which delivers the message in the same transaction. In the case of air-initiated Comm-B transfers, the transponder announces the intention to transmit a message; in a subsequent transaction an interrogator will extract the message.</i> <i>Note 2.— In a non-selective air-initiated Comm-B protocol all transactions necessary can be controlled by any interrogator.</i> <i>Note 3.— In some areas of overlapping interrogator coverage there may be no means for coordinating interrogator activities via ground communications. Air-initiated Comm-B communications protocols require more than one transaction for completion. Provision is made to ensure that a Comm-B message is closed out only by the interrogator that actually transferred the message. This can be accomplished through the use of the multisite Comm-B communications protocols or through the use of the enhanced Comm-B communications protocols.</i> <i>Note 4.— The multisite and the non-selective communications protocols cannot be used simultaneously in a region of overlapping interrogator coverage unless the interrogators coordinate their communications activities via ground communications.</i>	CAR 171.53(a)(1).	No Difference

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
	<i>Note 5.— The multisite communications protocol is independent of the multisite lockout protocol. That is, the multisite communications protocol may be used with the non-selective lockout protocol and vice versa. The choice of lockout and communications protocols to be used depends upon the network management technique being used.</i> <i>Note 6.— The broadcast Comm-B protocol can be used to make a message available to all active interrogators.</i> 3.1.2.6.11.1 <i>Comm-A.</i> The interrogator shall deliver a Comm-A message in the MA field of an interrogation UF = 20 or 21.				
Chapter 3 Reference 3.1.2.6.11.1.1 Standard	3.1.2.6.11.1.1 <i>Comm-A technical acknowledgement.</i> Acceptance of a Comm-A interrogation shall be automatically technically acknowledged by the transponder, by the transmission of the requested reply (3.1.2.10.5.2.2.1). <i>Note.— The receipt of a reply from the transponder according to the rules of 3.1.2.4.1.2.3 d) and 3.1.2.4.1.3.2.2.2 is the acknowledgement to the interrogator that the interrogation has been accepted by the transponder. If either uplink or downlink fail, this reply will be missing and the interrogator will normally send the message again. In the case of downlink failure, the transponder may receive the message more than once.</i>	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.6.11.3.1 Standard	3.1.2.6.11.3 <i>Air-initiated Comm-B</i> 3.1.2.6.11.3.1 <i>General protocol.</i> The transponder shall announce the presence of an air-initiated Comm-B message with the insertion of code 1 in the DR field. To extract an air-initiated Comm-B message, the interrogator shall transmit a request for a Comm-B message reply in a subsequent interrogation with RR equal to 16 and, if DI equals 7, RRS must be equal to 0 (3.1.2.6.11.3.2.1 and 3.1.2.6.11.3.3.1). Receipt of this request code shall cause the transponder to transmit the air-initiated Comm-B message. If a command to transmit an air-initiated Comm-B message is received while no message is waiting to be transmitted, the reply shall contain all ZEROs in the MB field. The reply that delivers the message shall continue to contain code 1 in the DR field. After a Comm-B closeout has been accomplished, the message shall be cancelled and the DR code belonging to this message immediately removed. If another air-initiated Comm-B message is waiting to be transmitted, the transponder shall set the DR code to 1, so that the reply contains the announcement of this next message. <i>Note.— The announcement and cancellation protocol ensures that an air-initiated message will not be lost due to uplink or downlink failures that occur during the delivery process.</i>	CAR 171.53(a)(1); CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.6.11.3.3.2 Standard	3.1.2.6.11.3.3.2 <i>Comm-B closeout.</i> The interrogator shall close out a non-selective air-initiated Comm-B message by transmitting PC equals 4 (Comm-B closeout). On receipt of this command, the transponder shall perform closeout, unless the B-timer is running. If the B-timer is running, indicating that a multisite reservation is in effect, closeout shall be accomplished as per 3.1.2.6.11.3.2.3. The transponder shall not close out a non-selective air-initiated Comm-B message unless it has been read out at least once by an interrogation using non-selective protocols.	CAR 171.53(a)(1); CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.6.11.3.4.1 Standard	3.1.2.6.11.3.4 <i>Enhanced air-initiated Comm-B protocol</i> <i>Note.— The enhanced air-initiated Comm-B protocol provides a higher data link capacity by permitting parallel delivery of air-initiated Comm-B messages by up to sixteen interrogators, one for each II code. Operation without the need for multisite Comm-B reservations is possible in regions of overlapping coverage for interrogators equipped for the enhanced air-initiated Comm-B protocol. The protocol is fully conformant to the standard multisite protocol and thus is compatible with interrogators that are not equipped for the enhanced protocol.</i> 3.1.2.6.11.3.4.1 The transponder shall be capable of storing each of the sixteen II codes: (1) an air-initiated or multisite-directed Comm-B message and (2) the contents of GICB registers 2 through 4. <i>Note.— GICB registers 2 through 4 are used for the Comm-B linking protocol defined in the Mode S subnetwork SARPs (Annex 10, Volume III, Part I, Chapter 5).</i>	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.6.11.3.4.2.1 Standard	3.1.2.6.11.3.4.2 <i>Enhanced multisite air-initiated Comm-B protocol</i> 3.1.2.6.11.3.4.2.1 <i>Initiation.</i> An air-initiated Comm-B message input into the transponder shall be stored in the registers assigned to II = 0.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.6.11.3.4.2.2 Standard	3.1.2.6.11.3.4.2.2 <i>Announcement and extraction.</i> A waiting air-initiated Comm-B message shall be announced in the DR field of the replies to all interrogators for which a multisite directed Comm-B message is not waiting. The UM field of the announcement reply shall indicate that the message is not reserved for any II code, i.e. the IIS subfield shall be set to 0. When a command to read this message is received from a given interrogator, the reply containing the message shall contain an IIS subfield content indicating that the message is reserved for the II code contained in the interrogation from that interrogator. After readout and until closeout, the message shall continue to be assigned to that II code. Once a message is assigned to a specific II code, announcement of this message shall be no longer made in the replies to interrogators with other II codes. If the message is not closed out by the assigned interrogator for the period of the B-timer, the message shall revert back to multisite air-initiated status and the process shall repeat. Only one multisite air-initiated Comm-B message shall be in process at a time.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.6.11.3.4.2.3 Standard	3.1.2.6.11.3.4.2.3 <i>Closeout.</i> A closeout for a multisite air-initiated message shall only be accepted from the interrogator that is currently assigned to transfer the message.	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.6.11.3.4.3.2 Standard	3.1.2.6.11.3.4.3.2 <i>Announcement.</i> Announcement of a Comm-B message waiting transfer shall be made using the DR field as specified in 3.1.2.6.5.2 with the destination interrogator II code contained in the IIS subfield as specified in 3.1.2.6.5.3.2. The DR field and IIS subfield contents shall be set specifically for the interrogator that is to receive the reply. A waiting multisite directed message shall only be announced in the replies to the intended interrogator. It shall not be announced in the replies to other interrogators. <i>Note 1.— If a multisite-directed message is waiting for II = 2, the surveillance replies to that interrogator will contain DR = 1 and IIS = 2. If this is the only message in process, replies to all other interrogators will indicate that no message is waiting.</i> <i>Note 2.— In addition to permitting parallel operation, this form of announcement enables a greater degree of announcement of downlink ELMs. The announcements for the downlink ELM and the Comm-B share the DR field. Only one announcement can take place at a time due to coding limitations. In case both a Comm-B and a downlink ELM are waiting, announcement preference is given to the Comm-B. In the example above, if an air-directed Comm-B was waiting for II = 2 and a multisite-directed downlink ELM was waiting for II = 6, both interrogators would see their respective announcements on the first scan since there would be no Comm-B announcement to II = 6 to block the announcement of the waiting downlink ELM.</i>	CAR 171.53(a)(1); CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.6.11.3.4.3.3 Standard	3.1.2.6.11.3.4.3.3 <i>Closeout.</i> Closeout shall be accomplished as specified in 3.1.2.6.11.3.2.3.	CAR 171.53(a)(1); CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.6.11.4.3 Standard	3.1.2.6.11.4.3 <i>Expiration.</i> When the B-timer period expires, the transponder shall clear the DR code for this message, discard the present broadcast message and change the broadcast message number (from 1 to 2 or 2 to 1) in preparation for a subsequent Comm-B broadcast.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.6.11.4.4 Standard	3.1.2.6.11.4.4 <i>Interruption.</i> In order to prevent a Comm-B broadcast cycle from delaying the delivery of an air-initiated Comm-B message, provision shall be made for an air-initiated Comm-B to interrupt a Comm-B broadcast cycle. If a broadcast cycle is interrupted, the B-timer shall be reset, the interrupted broadcast message shall be retained and the message number shall not be changed. Delivery of the interrupted broadcast message shall recommence when no air-initiated Comm-B transaction is in effect. The message shall then be broadcast for the full duration of the B-timer.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.6.11.4.5 Standard	3.1.2.6.11.4.5 <i>Enhanced broadcast Comm-B protocol.</i> A broadcast Comm-B message shall be announced to all interrogators using II codes. The message shall remain active for the period of the B-timer for each II code. The provision for interruption of a broadcast by non-broadcast Comm-B as specified in 3.1.2.6.11.4.4 shall apply separately to each II code. When the B-timer period has been achieved for all II codes, the broadcast message shall be automatically cleared as specified in 3.1.2.6.11.4.3. A new broadcast message shall not be initiated until the current broadcast has been cleared. <i>Note.— Due to the fact that broadcast message interruption occurs independently for each II code, it is possible that the broadcast message timeout will occur at different times for different II codes.</i>	CAR 171.53(a)(1); CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.7.1 Standard	3.1.2.7 Extended length communication transactions <i>Note 1.— Long messages, either on the uplink or the downlink, can be transferred by the extended length message (ELM) protocols through the use of Comm-C (UF = 24) and Comm-D (DF = 24) formats respectively. The ELM uplink protocol provides for the transmission on the uplink of up to sixteen 80-bit message segments before requiring a reply from the transponder. They also allow a corresponding procedure on the downlink.</i> <i>Note 2.— In some areas of overlapping interrogator coverage there may be no means for coordinating interrogator activities via ground communications. However, the ELM communication protocols require more than one transaction for completion; coordination is thus necessary to ensure that segments from different messages are not interleaved and that transactions are not inadvertently closed out by the wrong interrogator. This can be accomplished through the use of the multisite communications protocols or through the use of the enhanced ELM protocols.</i> <i>Note 3.— Downlink extended length messages are transmitted only after authorization by the interrogator. The segments to be transmitted are contained in Comm-D replies. As with air-initiated Comm-B messages, downlink ELMs are either announced to all interrogators or directed to a specific interrogator. In the former case an individual interrogator can use the multisite protocol to reserve for itself the ability to close out the downlink ELM transaction. A transponder can be instructed to identify the interrogator that has reserved the transponder for an ELM transaction. Only that interrogator can close out the ELM transaction and reservation.</i> <i>Note 4.— The multisite protocol and the non-selective</i>	CAR 171.53(a)(1).	No Difference

Chapter 3 Reference 3.1.2.7.4.2.1 Standard	3.1.2.7.4.2.1 <i>Initial segment transfer.</i> The interrogator shall begin the ELM uplink delivery for an n-segment message (NC values from 0 to n-1) by a Comm-C transmission containing RC equals 0. The message segment transmitted in the MC field shall be the last segment of the message and shall carry NC equals n-1. On receipt of an initializing segment (RC = 0) the transponder shall establish a “setup” defined as: a) clearing the number and content of previous segment storage registers and the associated TAS field; b) assigning storage space for the number of segments announced in NC of this interrogation; and c) storing the MC field of the segment received. The transponder shall not reply to this interrogation. Receipt of another initializing segment shall result in a new setup within the transponder.	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.7.4.2.2 Standard	3.1.2.7.4.2.2 <i>Transmission acknowledgement.</i> The transponder shall use the TAS subfield to report the segments received so far in an uplink ELM sequence. The information contained in the TAS subfield shall be continually updated by the transponder as segments are received. <i>Note.— Segments lost in uplink transmission are noted by their absence in the TAS report and are retransmitted by the interrogator which will then send further final segments to assess the extent of message completion.</i>	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.7.4.2.2.1 Standard	3.1.2.7.4.2.2.1 <i>TAS, transmission acknowledgement subfield in MD.</i> This 16-bit (17-32) downlink subfield in MD reports the segment numbers received so far in an uplink ELM sequence. Starting with bit 17, which denotes segment number 0, each of the following bits shall be set to ONE if the corresponding segment of the sequence has been received. TAS shall appear in MD if KE equals 1 in the same reply.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.7.4.2.3 Standard	3.1.2.7.4.2.3 <i>Intermediate segment transfer.</i> The interrogator shall transfer intermediate segments by transmitting Comm-C interrogations with RC equals 1. The transponder shall store the segments and update TAS only if the setup of 3.1.2.7.4.2.1 is in effect and if the received NC is smaller than the value stored at receipt of the initial segment. No reply shall be generated on receipt of an intermediate segment. <i>Note.— Intermediate segments may be transmitted in any order.</i>	CAR Part 91 Appendix A, A.22; CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.7.4.2.4 Standard	3.1.2.7.4.2.4 <i>Final segment transfer.</i> The interrogator shall transfer a final segment by transmitting a Comm-C interrogation with RC equals 2. The transponder shall store the content of the MC field and update TAS if the setup of 3.1.2.7.4.2.1 is in effect and if the received NC is smaller than the value of the initial segment NC. The transponder shall reply under all circumstances as per 3.1.2.7.4.2.5. <i>Note 1.— This final segment transfer interrogation can contain any message segment.</i> <i>Note 2.— RC equals 2 is transmitted any time that the interrogator wants to receive the TAS subfield in the reply. Therefore, more than one "final" segment may be transferred during the delivery of an uplink ELM.</i>	CAR Part 91 Appendix A, A.22; CAR 171.53(a)(1).	No Difference

Chapter 3 Reference 3.1.2.7.4.2.5 Standard	3.1.2.7.4.2.5 <i>Acknowledgement reply.</i> On receipt of a final segment, the transponder shall transmit a Comm-D reply (DF = 24), with KE equals 1 and with the TAS subfield in the MD field. This reply shall be transmitted at 128 microseconds plus or minus 0.25 microsecond following the sync phase reversal of the interrogation delivering the final segment.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.7.4.2.6 Standard	3.1.2.7.4.2.6 <i>Completed message.</i> The transponder shall deem the message complete if all segments announced by NC in the initializing segment have been received. If the message is complete, the message content shall be delivered to the outside via the ELM interface of 3.1.2.10.5.2.1.3 and cleared. No later-arriving segments shall be stored. The TAS content shall remain unchanged until either a new setup is called for (3.1.2.7.4.2.1) or until closeout (3.1.2.7.4.2.8).	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.7.4.2.7 Standard	3.1.2.7.4.2.7 <i>C-timer restart.</i> The C-timer shall be restarted each time that a received segment is stored and the Comm-C II is not 0. <i>Note.— The requirement for the Comm-C II to be non-zero prevents the C-timer from being restarted during a non-selective uplink ELM transaction.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.7.4.2.8 Standard	3.1.2.7.4.2.8 <i>Multisite uplink ELM closeout.</i> The interrogator shall close out a multisite uplink ELM by transmitting either a surveillance or a Comm-A interrogation containing: The transponder shall compare the IIS of the interrogation to the Comm-C II and if the interrogator identifiers do not match, the state of the ELM uplink process shall not be changed. If the interrogator identifiers match, the transponder shall set the Comm-C II to 0, reset the C-timer, clear the stored TAS and discard any stored segments of an incomplete message.	CAR Part 91 Appendix A, A.22; CAR 171.53(a)(1).	No Difference

Chapter 3 Reference 3.1.2.7.7.2 Standard	3.1.2.7.7.2 <i>Delivery of downlink ELMs.</i> The interrogator shall extract a downlink ELM by transmitting a Comm-C interrogation with RC equals 3. This interrogation shall carry the SRS subfield which specifies the segments to be transmitted. On receipt of this request, the transponder shall transfer the requested segments by means of Comm-D replies with KE equals 0 and ND corresponding to the number of the segment in MD. The first segment shall be transmitted 128 microseconds plus or minus 0.25 microsecond following the sync phase reversal of the interrogation requesting delivery and subsequent segments shall be transmitted at a rate of one every 136 microseconds plus or minus 1 microsecond. If a request is received to transmit downlink ELM segments and no message is waiting, each reply segment shall contain all ZEROs in the MD field. <i>Note 1.— The requested segments may be transmitted in any order.</i> <i>Note 2.— Segments lost in downlink transmissions will be requested again by the interrogator on a subsequent interrogation carrying the SRS subfield. This process is repeated until all segments have been transferred.</i>	CAR 171.53(a)(1); CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.7.7.2.1 Standard	3.1.2.7.7.2.1 <i>SRS, segment request subfield in MC.</i> This 16-bit (9-24) uplink subfield in MC shall request the transponder to transfer downlink ELM segments. Starting with bit 9, which denotes segment number 0, each of the following bits shall be set to ONE if the transmission of the corresponding segment is requested. SRS shall appear in MC if RC equals 3 in the same interrogation.	CAR 171.53(a)(1).	No Difference

Chapter 3 Reference 3.1.2.7.7.2.2 Standard	3.1.2.7.7.2.2 <i>D-timer restart.</i> The D-timer shall be restarted each time that a request for Comm-D segments is received if the Comm-D II is non-zero. <i>Note.— The requirement for the Comm-D II to be non-zero prevents the D-timer from being restarted during a non-selective downlink ELM transaction.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.7.7.3 Standard	3.1.2.7.7.3 <i>Multisite downlink ELM closeout.</i> The interrogator shall close out a multisite downlink ELM by transmitting either a surveillance or a Comm-A interrogation containing: The transponder shall compare the IIS of the interrogation to the Comm-D II and if the interrogator identifiers do not match, the state of the downlink process shall not be changed. If the interrogator identifiers match, and if a request for transmission has been complied with at least once, the transponder shall set the Comm-D II to 0, reset the D-timer, clear the DR code for this message and clear the message itself. If another downlink ELM is waiting to be transmitted, the transponder shall set the DR code (if no Comm-B message is waiting to be delivered) so that the reply contains the announcement of the next message.	CAR Part 91 Appendix A, A.22; CAR 171.53(a)(1).	No Difference

Chapter 3 Reference 3.1.2.7.4 Standard	3.1.2.7.4 <i>Automatic expiration of downlink ELM reservation.</i> If the D-timer period expires before a multisite closeout has been accomplished, the Comm-D II shall be set to 0, and the D-timer reset. The message and DR code shall not be cleared. <i>Note.— This makes it possible for another site to read and clear this message.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.7.8 Standard	3.1.2.7.8 <i>Non-selective downlink ELM</i> <i>Note.— In cases where the multisite protocols are not required (i.e. no overlapping coverage or sensor coordination via ground-to-ground communication), the non-selective downlink ELM protocol may be used.</i> Non-selective downlink ELM delivery shall take place as described in 3.1.2.7.2.	CAR 171.53(a)(1).	No Difference		
Chapter 3 Reference 3.1.2.7.8.1 Standard	3.1.2.7.8.1 <i>Non-selective downlink ELM closeout.</i> The interrogator shall close out a non-selective downlink ELM by transmitting PC equals 6 (downlink ELM closeout) in a surveillance or Comm-A interrogation. On receipt of this command, and if a request for transmission has been complied with at least once, the transponder shall perform closeout unless the D-timer is running. If the D-timer is running, indicating that a multisite reservation is in effect, the closeout shall be accomplished as per 3.1.2.7.7.3.	CAR 171.53(a)(1); CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.7.9.2.1 Standard	3.1.2.7.9.2 <i>Enhanced multisite downlink ELM protocol</i> 3.1.2.7.9.2.1 The transponder shall be capable of storing a sixteen segment message for each of the sixteen II codes.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.7.9.2.2 Standard	3.1.2.7.9.2.2 <i>Initialization.</i> A multisite message input into the transponder shall be stored in the registers assigned to II = 0.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.7.9.2.3 Standard	3.1.2.7.9.2.3 <i>Announcement and extraction.</i> A waiting multisite downlink ELM message shall be announced in the DR field of the replies to all interrogators for which a multisite directed downlink ELM message is not waiting. The UM field of the announcement reply shall indicate that the message is not reserved for any II code, i.e. the IIS subfield shall be set to 0. When a command to reserve this message is received from a given interrogator, the message shall be reserved for the II code contained in the interrogation from that interrogator. After readout and until closeout, the message shall continue to be assigned to that II code. Once a message is assigned to a specific II code, announcement of this message shall no longer be made in the replies to interrogators with other II codes. If the message is not closed out by the associated interrogator for the period of the D-timer, the message shall revert back to multisite status and the process shall repeat. Only one multisite downlink ELM message shall be in process at a time.	CAR Part 91 Appendix A, A.22.	No Difference

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.8.6.4.1 Standard	3.1.2.8.6.4 <i>Extended squitter rate</i> 3.1.2.8.6.4.1 <i>Initialization.</i> At power up initialization, the transponder shall commence operation in a mode in which it broadcasts only acquisition squitters (3.1.2.8.5). The transponder shall initiate the broadcast of extended squitters for airborne position, surface position, airborne velocity and aircraft identification when data are inserted into transponder registers 05, 06, 09 and 08 {HEX}, respectively. This determination shall be made individually for each squitter type. When extended squitters are broadcast, transmission rates shall be as indicated in the following paragraphs. Acquisition squitters shall be reported in addition to extended squitters unless the acquisition squitter is inhibited (2.1.5.4). Acquisition squitters shall always be reported if both position and velocity extended squitters are not reported. <i>Note 1.— This suppresses the transmission of extended squitters from aircraft that are unable to report position, velocity or identity. If input to the register for the position squitter type stops for 60 seconds, broadcast will be discontinued until data insertion is resumed. Broadcast of airborne position squitters is not discontinued if barometric altitude data is available. Terminating broadcast of other squitter types is described in Technical Provisions for Mode S Services and Extended Squitter (Doc 9871).</i> <i>Note 2.— After timeout (3.1.2.8.6.6), the position squitter type may contain an ME field of all zeroes.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.8.6.4.2 Standard	3.1.2.8.6.4.2 <i>Airborne position squitter rate.</i> Airborne position squitter transmissions shall be emitted when the aircraft is airborne (3.1.2.8.6.7) at random intervals that are uniformly distributed over the range from 0.4 to 0.6 seconds using a time quantization of no greater than 15 milliseconds relative to the previous airborne position squitter, with the exceptions as specified in 3.1.2.8.6.4.7.	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.8.6.4.3 Standard	3.1.2.8.6.4.3 <i>Surface position squitter rate.</i> Surface position squitter transmissions shall be emitted when the aircraft is on the surface (3.1.2.8.6.7) using one of two rates depending upon whether the high or low squitter rate has been selected (3.1.2.8.6.9). When the high squitter rate has been selected, surface position squitters shall be emitted at random intervals that are uniformly distributed over the range from 0.4 to 0.6 seconds using a time quantization of no greater than 15 milliseconds relative to the previous surface position squitter (termed the high rate). When the low squitter rate has been selected, surface position squitters shall be emitted at random intervals that are uniformly distributed over the range of 4.8 to 5.2 seconds using a time quantization of no greater than 15 milliseconds relative to the previous surface position squitter (termed the low rate). Exceptions to these transmission rates are specified in 3.1.2.8.6.4.7.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.8.6.4.4 Standard	3.1.2.8.6.4.4 <i>Aircraft identification squitter rate.</i> Aircraft identification squitter transmissions shall be emitted at random intervals that are uniformly distributed over the range of 4.8 to 5.2 seconds using a time quantization of no greater than 15 milliseconds relative to the previous identification squitter when the aircraft is reporting the airborne position squitter type, or when the aircraft is reporting the surface position squitter type and the high surface squitter rate has been selected. When the surface position squitter type is being reported at the low surface rate, the aircraft identification squitter shall be emitted at random intervals that are uniformly distributed over the range of 9.8 to 10.2 seconds using a time quantization of no greater than 15 milliseconds relative to the previous identification squitter. Exceptions to these transmission rates are specified in 3.1.2.8.6.4.7.	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.8.6.4.5 Standard	3.1.2.8.6.4.5 <i>Airborne velocity squitter rate.</i> Airborne velocity squitter transmissions shall be emitted when the aircraft is airborne (3.1.2.8.6.7) at random intervals that are uniformly distributed over the range from 0.4 to 0.6 seconds using a time quantization of no greater than 15 milliseconds relative to the previous airborne velocity squitter, with the exceptions as specified in 3.1.2.8.6.4.7.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.8.6.4.6.1 Standard	3.1.2.8.6.4.6 <i>Periodic status and event-driven squitter rates</i> 3.1.2.8.6.4.6.1 <i>Periodic status squitter rates.</i> The periodic status squitter types supported by a Mode S extended squitter transmitting system class, as specified in 5.1.1.2, shall be periodically emitted at defined intervals depending on the on-the-ground status and whether their content has changed. <i>Note.— The aircraft operational status extended squitter type and the target state and status extended squitter type rates are specified in the Technical Provisions for Mode S Services and Extended Squitter (Doc 9871).</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.8.6.4.6.2 Standard	3.1.2.8.6.4.6.2 <i>Event-driven squitter rate.</i> The event-driven squitter shall be transmitted once, each time that GICB register 0A {HEX} is loaded, while observing the delay conditions specified in 3.1.2.8.6.4.7. The maximum transmission rate for the event-driven squitter shall be limited by the transponder to twice per second. If a message is inserted in the event-driven register and cannot be transmitted due to rate limiting, it shall be held and transmitted when the rate limiting condition has cleared. If a new message is received before transmission is permitted, it shall overwrite the earlier message.	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.8.6.4.7 Standard	3.1.2.8.6.4.7 <i>Delayed transmission.</i> Extended squitter transmission shall be delayed in the following circumstances: a) if the transponder is in a transaction cycle (3.1.2.4.1); b) if an acquisition or another type of extended squitter is in process; or c) if a mutual suppression interface is active. The delayed squitter shall be transmitted as soon as the transponder becomes available.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.8.6.5 Standard	3.1.2.8.6.5 <i>Extended squitter antenna selection.</i> Transponders operating with antenna diversity (3.1.2.10.4) shall transmit extended squitters as follows: a) when airborne (3.1.2.8.6.7), the transponder shall transmit each type of extended squitter alternately from the two antennas; and b) when on the surface (3.1.2.8.6.7), the transponder shall transmit extended squitters under control of SAS (3.1.2.6.1.4.1 f). In the absence of any SAS commands, use of the top antenna only shall be the default condition.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.8.6.6 Standard	3.1.2.8.6.6 <i>Register time-out and termination.</i> The transponder shall clear and terminate broadcast of information in extended squitter registers as required to prevent the reporting of outdated information. <i>Note.— Timeout and termination of extended squitter broadcast is specified in the Technical Provisions for Mode S Services and Extended Squitter (Doc 9871).</i>	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.8.6.7 Standard	3.1.2.8.6.7 <i>Airborne/surface state determination.</i> Aircraft with an automatic means of determining on-the-ground conditions shall use this input to select whether to report the airborne or surface message types. Aircraft without such means shall report the airborne type messages, except as specified in Table 3-7. Use of this table shall only be applicable to aircraft that are equipped to provide data for radio altitude AND, as a minimum, airspeed OR ground speed. Otherwise, aircraft in the specified categories that are only equipped to provide data for airspeed and ground speed shall broadcast the surface format if: airspeed < 50 knots AND ground speed < 50 knots Aircraft with or without such automatic on-the-ground determination shall use position message types as commanded by control codes in TCS (3.1.2.6.1.4.1 f)). After time-out of the TCS commands, control of airborne/surface determination shall revert to the means described above. <i>Note 1. — Use of this technique may result in the surface position format being transmitted when the air-ground status in the CA fields indicates “airborne or on the ground”.</i> <i>Note 2.— Extended squitter ground stations determine aircraft airborne or on-the-ground status by monitoring aircraft position, altitude and ground speed. Aircraft determined to be on the ground that are not reporting the surface position message types will be commanded to report the surface formats via TCS (3.1.2.6.1.4.1 f)). The normal return to the airborne position message types is via a ground command to report airborne message types. To guard against loss of communications after take-off, commands to report the surface position message types automatically time-out.</i>	CAR Part 91 Appendix A, A.22.	No Difference

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.8.6.8 Standard	3.1.2.8.6.8 <i>Squitter status reporting.</i> A GICB request (3.1.2.6.11.2) containing RR equals 16 and DI equals 3 or 7 and RRS equals 7 shall cause the resulting reply to contain the squitter status report in its MB field.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.8.6.8.1 Standard	3.1.2.8.6.8.1 <i>TRS, transmission rate subfield in MB.</i> The transponder shall report the capability of the aircraft to automatically determine its surface squitter rate and its current squitter rate in this 2-bit (33, 34) subfield of MB. <i>Note 1.— High and low squitter rate is determined on board the aircraft.</i> <i>Note 2.— The low rate is used when the aircraft is stationary and the high rate is used when the aircraft is moving. For details of how “moving” is determined, see the data format of register 0716 in the Technical Provisions for Mode S Services and Extended Squitter (Doc 9871).</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.8.6.8.2 Standard	3.1.2.8.6.8.2 <i>ATS, altitude type subfield in MB.</i> The transponder shall report the type of altitude being provided in the airborne position extended squitter in this 1-bit (35) subfield of MB when the reply contains the contents of transponder register 07 {HEX}. <i>Note.— Details of the contents of transponder registers 05 {HEX} and 07 {HEX} are shown in the Technical Provisions for Mode S Services and Extended Squitter (Doc 9871).</i>	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.8.6.9 Standard	3.1.2.8.6.9 <i>Surface squitter rate control.</i> Surface squitter rate shall be determined as follows: a) once per second the contents of the TRS shall be read. If the value of TRS is 0 or 1, the transponder shall transmit surface squitters at the high rate. If the value of TRS is 2, the transponder shall transmit surface squitters at the low rate; b) the squitter rate determined via TRS shall be subject to being overridden by commands received via RCS (3.1.2.6.1.4.1 f)). RCS code 1 shall cause the transponder to squitter at the high rate for 60 seconds. RCS code 2 shall cause the transponder to squitter at the low rate for 60 seconds. These commands shall be able to be refreshed for a new 60 second period before time-out of the prior period; and c) after time-out and in the absence of RCS codes 1 and 2, control shall return to TRS.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.8.6.10 Standard	3.1.2.8.6.10 <i>Latitude/longitude coding using compact position reporting (CPR).</i> Mode S extended squitter shall use compact position reporting (CPR) to encode latitude and longitude efficiently into messages. <i>Note.— The method used to encode/decode CPR is specified in the Technical Provisions for Mode S Services and Extended Squitter (Doc 9871).</i>	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.8.6.11 Standard	3.1.2.8.6.11 <i>Data insertion.</i> When the transponder determines that it is time to emit an airborne position squitter, it shall insert the current value of the barometric altitude (unless inhibited by the ATS subfield, 3.1.2.8.6.8.2) and surveillance status into the appropriate fields of register 05 {HEX}. The contents of this register shall then be inserted into the ME field of DF = 17 and transmitted. <i>Note.— Insertion in this manner ensures that (1) the squitter contains the latest altitude and surveillance status, and (2) ground read-out of register 05 {HEX} will yield exactly the same information as the AC field of a Mode S surveillance reply.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.8.7.1 Standard	3.1.2.8.7.1 <i>ES supplementary format.</i> The format used for ES supplementary shall be a 112-bit downlink format (DF = 18) containing the following fields: The PI field shall be encoded with II equal to zero.	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.8.9.1 Standard	3.1.2.8.9 <i>Extended squitter maximum transmission rate</i> 3.1.2.8.9.1 The maximum total number of full power extended squitters (DF = 17, 18 and 19) emitted by any extended squitter installation shall not exceed the following: a) 6.2 messages per second averaged over 60 seconds for nominal aircraft operations with no emergency and no ACAS RA activity, while not exceeding 11 messages being transmitted in any 1-second interval; or b) 7.4 messages per second averaged over 60 seconds under an emergency and/or ACAS RA condition, while not exceeding 11 messages being transmitted in any 1-second interval.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.8.9.2 Standard	3.1.2.8.9.2 For installations capable of emitting DF = 19 squitters and in accordance with 3.1.2.8.8, transmission rates for lower power DF = 19 squitters shall be limited to a peak of forty DF = 19 squitters per second, and thirty DF = 19 squitters per second averaged over 10 seconds, provided that the maximum total squitter power-rate product for the sum of full power DF = 17 squitters, full power DF = 18 squitters, full power DF = 19 squitters, and lower power DF = 19 squitters, is maintained at or below a level equivalent to the power sum of 6.2 full power squitters per second averaged over 10 seconds.	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.8.9.3 Standard	3.1.2.8.9.3 States shall ensure that the use of low power and higher rate DF = 19 operation (as per 3.1.2.8.9.2) is compliant with the following requirements: a) it is limited to formation or element lead aircraft engaged in formation flight, directing the messages toward wing and other lead aircraft through a directional antenna with a beamwidth of no more than 90 degrees; and b) the type of information contained in the DF = 19 message is limited to the same type of information in the DF = 17 message, that is, information for the sole purpose of safety-of-flight. <i>Note.— This low-power, higher squitter rate capability is intended for limited use by State aircraft in coordination with appropriate regulatory bodies.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.8.9.4 Standard	3.1.2.8.9.4 All UF = 19 airborne interrogations shall be included in the interference control provisions of 4.3.2.2.2.2.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.9.1 Standard	3.1.2.9 Aircraft identification protocol 3.1.2.9.1 <i>Aircraft identification reporting.</i> A ground-initiated Comm-B request (3.1.2.6.11.2) containing RR equals 18 and either DI does not equal 7 or DI equals 7 and RRS equals 0 shall cause the resulting reply to contain the aircraft identification in its MB field.	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.9.1.1 Standard	3.1.2.9.1.1 <i>AIS, aircraft identification subfield in MB.</i> The transponder shall report the aircraft identification in the 48-bit (41-88) AIS subfield of MB. The aircraft identification transmitted shall be that employed in the flight plan. When no flight plan is available, the registration marking of the aircraft shall be inserted in this subfield. <i>Note.— When the registration marking of the aircraft is used, it is classified as “fixed direct data” (3.1.2.10.5.1.1). When another type of aircraft identification is used, it is classified as “variable direct data” (3.1.2.10.5.1.3).</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.9.1.2 Standard	3.1.2.9.1.2 <i>Coding of the AIS subfield.</i> The AIS subfield shall be coded as follows: <i>Note.— Aircraft identification coding provides up to eight characters.</i> The BDS code for the aircraft identification message shall be BDS1 equals 2 (33-36) and BDS2 equals 0 (37-40). Each character shall be coded as a 6-bit subset of the International Alphabet Number 5 (IA-5) as illustrated in Table 3-8. The character code shall be transmitted with the high order unit (<i>b6</i>) first and the reported aircraft identification shall be transmitted with its left-most character first. Characters shall be coded consecutively without intervening SPACE code. Any unused character spaces at the end of the subfield shall contain a SPACE character code.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.9.1.3 Standard	3.1.2.9.1.3 <i>Aircraft identification capability report.</i> Transponders which respond to a ground-initiated request for aircraft identification shall report this capability in the data link capability report (3.1.2.6.10.2.2.2) by setting bit 33 of the MB subfield to 1.	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.9.1.4 Standard	3.1.2.9.1.4 <i>Change of aircraft identification.</i> If the aircraft identification reported in the AIS subfield is changed in flight, the transponder shall report the new identification to the ground by use of the Comm-B broadcast message protocol of 3.1.2.6.11.4 for BDS1 = 2 (33 - 36) and BDS2 = 0 (37 - 40). The transponder shall initiate, generate and announce the revised aircraft identification even if the interface providing flight identification is lost. The transponder shall ensure that the BDS code is set for the aircraft identification report in all cases, including a loss of the interface. In this latter case, bits 41 - 88 shall contain all ZEROS. <i>Note.— The setting of the BDS code by the transponder ensures that a broadcast change of aircraft identification will contain the BDS code for all cases of flight identification failure (e.g. the loss of the interface providing flight identification).</i>	CAR Part 91 Appendix A, A.22.	No Difference

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.10.1 Standard	3.1.2.10 Essential system characteristics of the SSR Mode S transponder 3.1.2.10.1 <i>Transponder sensitivity and dynamic range.</i> Transponder sensitivity shall be defined in terms of a given interrogation signal input level and a given percentage of corresponding replies. Only correct replies containing the required bit pattern for the interrogation received shall be counted. Given an interrogation that requires a reply according to 3.1.2.4, the minimum triggering level, MTL, shall be defined as the minimum input power level for 90 per cent reply-to-interrogation ratio. The MTL shall be -74 dBm ±3 dB for Mode S interrogations (interrogations using <i>P6</i>), and as defined in 3.1.1.7.5.1 b) for Mode A and C, and inter-mode interrogations. The reply-to-interrogation ratio of a Mode S transponder shall be: a) at least 99 per cent for signal input levels between 3 dB above MTL and -21 dBm; and b) no more than 10 per cent at signal input levels below -81 dBm. <i>Note.— Transponder sensitivity and output power are described in this section in terms of signal level at the terminals of the antenna. This gives the designer freedom to arrange the installation, optimizing cable length and receiver-transmitter design, and does not exclude receiver and/or transmitter components from becoming an integral part of the antenna subassembly.</i>	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.10.1.1.1 Standard	3.1.2.10.1.1 <i>Reply ratio in the presence of interference</i> <i>Note.— The following paragraphs present measures of the performance of the Mode S transponder in the presence of interfering Mode A/C interrogation pulses and low-level in-band CW interference.</i> 3.1.2.10.1.1.1 <i>Reply ratio in the presence of an interfering pulse.</i> Given a Mode S interrogation which requires a reply (3.1.2.4), the reply ratio of a transponder shall be at least 95 per cent in the presence of an interfering Mode A/C interrogation pulse if the level of the interfering pulse is 6 dB or more below the signal level for Mode S input signal levels between -68 dBm and -21 dBm and the interfering pulse overlaps the <i>P6</i> pulse of the Mode S interrogation anywhere after the sync phase reversal. Under the same conditions, the reply ratio shall be at least 50 per cent if the interference pulse level is 3 dB or more below the signal level.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.1.1.2 Standard	3.1.2.10.1.1.2 <i>Reply ratio in the presence of pulse pair interference.</i> Given an interrogation which requires a reply (3.1.2.4), the reply ratio of a transponder shall be at least 90 per cent in the presence of an interfering <i>P1 – P2</i> pulse pair if the level of the interfering pulse pair is 9 dB or more below signal level for input signal levels between -68 dBm and -21 dBm and the <i>P1</i> pulse of the interfering pair occurs no earlier than the <i>P1</i> pulse of the Mode S signal.	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.10.1.1.3 Standard	3.1.2.10.1.1.3 <i>Reply ratio in the presence of low level asynchronous interference.</i> For all received signals between –65 dBm and –21 dBm and given a Mode S interrogation that requires a reply according to 3.1.2.4 and if no lockout condition is in effect, the transponder shall reply correctly with at least 95 per cent reply ratio in the presence of asynchronous interference. Asynchronous interference shall be taken to be a single Mode A/C interrogation pulse occurring at all repetition rates up to 10 000 Hz at a level 12 dB or more below the level of the Mode S signal. <i>Note.— Such pulses may combine with the P1 and P2 pulses of the Mode S interrogation to form a valid Mode A/C-only all-call interrogation. The Mode S transponder does not respond to Mode A/C-only all-call interrogations. A preceding pulse may also combine with the P2 of the Mode S interrogation to form a valid Mode A or Mode C interrogation. However, the P1 – P2 pair of the Mode S preamble takes precedence (3.1.2.4.1.1.1). The Mode S decoding process is independent of the Mode A/Mode C decoding process and the Mode S interrogation is accepted.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.1.1.4 Standard	3.1.2.10.1.1.4 <i>Reply ratio in the presence of low-level in-band CW interference.</i> In the presence of non-coherent CW interference at a frequency of 1 030 ±0.2 MHz at signal levels of 20 dB or more below the desired Mode A/C or Mode S interrogation signal level, the transponder shall reply correctly to at least 90 per cent of the interrogations.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.1.1.5.1 Recommendation	3.1.2.10.1.1.5 <i>Spurious response</i> 3.1.2.10.1.1.5.1 Recommendation.— <i>The response to signals not within the receiver pass band should be at least 60 dB below normal sensitivity.</i>	CARs, Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.10.1.1.5.2 Standard	3.1.2.10.1.1.5.2 For transponder designs first certified on or after 1 January 2011, the spurious Mode A/C reply ratio resulting from low level Mode S interrogations shall be no more than: a) an average of 1 per cent in the input interrogation signal range between -81 dBm and the Mode S MTL; and b) a maximum of 3 per cent at any given level in the input interrogation signal range between -81 dBm and the Mode S MTL. <i>Note 1.— Failure to detect a low level Mode S interrogation can also result in the transponder decoding a three-pulse Mode A/C/S all-call interrogation. This would result in the transponder responding with a Mode S all-call (DF = 11) reply. The above requirement will also control these DF = 11 replies since it places a limit on the probability of failing to correctly detect the Mode S interrogation.</i> <i>Note 2.— More information about issuing a type certificate for aircraft and separate design approval can be found in the Airworthiness Manual (Doc 9760).</i>	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.10.2 Standard	3.1.2.10.2 <i>Transponder peak pulse power.</i> The peak power of each pulse of a reply shall: a) not be less than 18.5 dBW for aircraft not capable of operating at altitudes exceeding 4 570 m (15 000 ft); b) not be less than 21.0 dBW for aircraft capable of operating above 4 570 m (15 000 ft); c) not be less than 21.0 dBW for aircraft with maximum cruising speed exceeding 324 km/h (175 kt); and d) not exceed 27.0 dBW.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.2.1 Standard	3.1.2.10.2.1 <i>Inactive state transponder output power.</i> When the transponder is in the inactive state the peak pulse power at 1 090 MHz plus or minus 3 MHz shall not exceed –50 dBm. The inactive state is defined to include the entire period between transmissions less 10-microsecond transition periods preceding the first pulse and following the last pulse of the transmission. <i>Note.— Inactive state transponder power is constrained in this way to ensure that an aircraft, when located as near as 185 m (0.1 NM) to a Mode A/C or Mode S interrogator, does not cause interference to that installation. In certain applications of Mode S, airborne collision avoidance for example, where a 1 090 MHz transmitter and receiver are in the same aircraft, it may be necessary to further constrain the inactive state transponder power.</i>	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.10.3.7.4 Standard	3.1.2.10.3.7.4 <i>Minimum Mode S ELM peak reply rate</i> <i>Note 1.— When a downlink ELM is initialized (3.1.2.7.7.1), the Mode S transponder announces the length (in segments) of the waiting message. The transponder must be able to transmit this number of segments, plus an additional margin to make up for missed replies, during the beam dwell of the ground interrogator.</i> At least once every second a Mode S transponder equipped for ELM downlink operation shall be capable of transmitting in a 25-millisecond interval, at least 25 per cent more segments than have been announced in the initialization (3.1.2.7.7.1). The minimum length downlink ELM capability for level 4 and 5 transponders shall be as specified in 3.1.2.10.5.2.2.2. <i>Note 2.— A transponder capable of processing the maximum length downlink ELM (16 segments) is therefore required to be able to transmit 20 long replies under the above conditions. Level 4 transponders may be built which process less than the maximum message length. These transponders cannot initialize a message length that exceeds their transmitter capability. For example, a transponder that can transmit at most 10 long replies under the above conditions can never announce a message of more than 8 segments.</i>	CAR Part 91 Appendix A, A.22.	No Difference

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.10.3.9 Standard	3.1.2.10.3.9 <i>Timers.</i> Duration and features of timers shall be as shown in Table 3-9. All timers shall be capable of being restarted. On receipt of any start command, they shall run for their specified times. This shall occur regardless of whether they are in the running or the non-running state at the time that the start command is received. A command to reset a timer shall cause the timer to stop running and to return to its initial state in preparation for a subsequent start command.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.3.10 Standard	3.1.2.10.3.10 <i>Inhibition of replies.</i> Replies to Mode A/C/S all-call and Mode S-only all-call interrogations shall always be inhibited when the aircraft declares the on-the-ground state. It shall not be possible to inhibit replies to discretely addressed Mode S interrogations regardless of whether the aircraft is airborne or on the ground.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.3.10.1 Recommendation	3.1.2.10.3.10.1 Recommendation. — <i>Aircraft should provide means to determine the on-the-ground state automatically and provide that information to the transponder.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.3.10.2 Recommendation	3.1.2.10.3.10.2 Recommendation. — <i>Mode A/C replies should be inhibited when the aircraft is on the ground to prevent interference when in close proximity to an interrogator or other aircraft.</i> <i>Note.</i> — <i>Mode S discretely addressed interrogations do not give rise to such interference and may be required for data link communications with aircraft on the airport surface. Acquisition squitter transmissions may be used for passive surveillance of aircraft on the airport surface.</i>	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.10.4 Standard	3.1.2.10.4 <i>Transponder antenna system and diversity operation.</i> Mode S transponders equipped for diversity operation shall have two RF ports for operation with two antennas, one antenna on the top and the other on the bottom of the aircraft's fuselage. The received signal from one of the antennas shall be selected for acceptance and the reply shall be transmitted from the selected antenna only.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.4.1 Standard	3.1.2.10.4.1 <i>Radiation pattern.</i> The radiation pattern of Mode S antennas when installed on an aircraft shall be nominally equivalent to that of a quarter-wave monopole on a ground plane. <i>Note.— Transponder antennas designed to increase gain at the expense of vertical beamwidth are undesirable because of their poor performance during turns.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.4.2 Standard	3.1.2.10.4.2 <i>Antenna location.</i> The top and bottom antennas shall be mounted as near as possible to the centre line of the fuselage. Antennas shall be located so as to minimize obstruction to their fields in the horizontal plane.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.4.2.1 Recommendation	3.1.2.10.4.2.1 Recommendation.— <i>The horizontal distance between the top and bottom antennas should not be greater than 7.6 m (25 ft).</i> <i>Note.— This recommendation is intended to support the operation of any diversity transponder (including cables) with any diversity antenna installation and still satisfy the requirement of 3.1.2.10.4.5.</i>	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.10.4.3 Standard	3.1.2.10.4.3 <i>Antenna selection.</i> Mode S transponders equipped for diversity operation shall have the capability to evaluate a pulse sequence simultaneously received on both antenna channels to determine individually for each channel if the <i>P1</i> pulse and the <i>P2</i> pulse of a Mode S interrogation preamble meet the requirements for a Mode S interrogation as defined in 3.1.2.1 and if the <i>P1</i> pulse and the <i>P3</i> pulse of a Mode A, Mode C or intermode interrogation meet the requirements for Mode A and Mode C interrogations as defined in 3.1.1. <i>Note.— Transponders equipped for diversity operation may optionally have the capability to evaluate additional characteristics of the received pulses of the interrogations in making a diversity channel selection. The transponder may as an option evaluate a complete Mode S interrogation simultaneously received on both channels to determine individually for each channel if the interrogation meets the requirements for Mode S interrogation acceptance as defined in 3.1.2.4.1.2.3.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.4.3.1 Standard	3.1.2.10.4.3.1 If the two channels simultaneously receive at least a <i>P1 – P2</i> pulse pair that meets the requirements for a Mode S interrogation, or a <i>P1 – P3</i> pulse pair that meets the requirements for a Mode A or Mode C interrogation, or if the two channels simultaneously accept a complete interrogation, the antenna at which the signal strength is greater shall be selected for the reception of the remainder (if any) of the interrogation and for the transmission of the reply.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.4.3.2 Standard	3.1.2.10.4.3.2 If only one channel receives a pulse pair that meets the requirements for an interrogation, or if only one channel accepts an interrogation, the antenna associated with that channel shall be selected regardless of received signal strength.	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.10.4.3.3 Standard	3.1.2.10.4.3.3 <i>Selection threshold.</i> If antenna selection is based on signal level, it shall be carried out at all signal levels between MTL and -21 dBm. <i>Note.— Either antenna may be selected if the difference in signal level is less than 3 dB.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.4.3.4 Standard	3.1.2.10.4.3.4 <i>Received signal delay tolerance.</i> If an interrogation is received at one antenna 0.125 microsecond or less in advance of reception at the other antenna, the interrogations shall be considered to be simultaneous interrogations, and the above antenna selection criteria applied. If an accepted interrogation is received at either antenna 0.375 microsecond or more in advance of reception at the other antenna, the antenna selected for the reply shall be that which received the earlier interrogation. If the relative time of receipt is between 0.125 and 0.375 microsecond, the transponder shall select the antenna for reply either on the basis of the simultaneous interrogation criteria or on the basis of the earlier time of arrival.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.4.4 Standard	3.1.2.10.4.4 <i>Diversity transmission channel isolation.</i> The peak RF power transmitted from the selected antenna shall exceed the power transmitted from the non-selected antenna by at least 20 dB.	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.10.4.5 Standard	3.1.2.10.4.5 <i>Reply delay of diversity transponders.</i> The total two-way transmission difference in mean reply delay between the two antenna channels (including the differential delay caused by transponder-to-antenna cables and the horizontal distance along the aircraft centre line between the two antennas) shall not exceed 0.13 microsecond for interrogations of equal amplitude. This requirement shall hold for interrogation signal strengths between MTL +3 dB and -21 dBm. The jitter requirements on each individual channel shall remain as specified for non-diversity transponders. <i>Note.— This requirement limits apparent jitter caused by antenna switching and by cable delay differences.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.5.1 Standard	3.1.2.10.5 <i>Data processing and interfaces</i> 3.1.2.10.5.1 <i>Direct data.</i> Direct data shall be those which are required for the surveillance protocol of the Mode S system.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.5.1.1 Standard	3.1.2.10.5.1.1 <i>Fixed direct data.</i> Fixed direct data are data from the aircraft which do not change in flight and shall be: a) the aircraft address (3.1.2.4.1.2.3.1.1 and 3.1.2.5.2.2.2); b) the maximum airspeed (3.1.2.8.2.2); and c) the registration marking if used for flight identification (3.1.2.9.1.1).	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.10.5.1.2 Recommendation	3.1.2.10.5.1.2 <i>Interfaces for fixed direct data</i> Recommendation. — <i>Interfaces from the transponder to the aircraft should be designed such that the values of the fixed direct data become a function of the aircraft installation rather than of the transponder configuration.</i> <i>Note.</i> — <i>The intent of this recommendation is to encourage an interface technique which permits transponder exchange without manipulation of the transponder itself for setting the fixed direct data.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.5.1.3 Standard	3.1.2.10.5.1.3 <i>Variable direct data.</i> Variable direct data are data from the aircraft which can change in flight and shall be: a) the Mode C altitude code (3.1.2.6.5.4); b) the Mode A identity code (3.1.2.6.7.1); c) the on-the-ground condition (3.1.2.5.2.2.1, 3.1.2.6.5.1 and 3.1.2.8.2.1); d) the aircraft identification if different from the registration marking (3.1.2.9.1.1); and e) the SPI condition (3.1.2.6.10.1.3).	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.5.1.4.1 Standard	3.1.2.10.5.1.4 <i>Interfaces for variable direct data.</i> 3.1.2.10.5.1.4.1 A means shall be provided, while on the ground or during flight, for the SPI condition to be inserted by the pilot, without the entry or modification of other flight data.	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.10.5.1.4.2 Standard	3.1.2.10.5.1.4.2 A means shall be provided, while on the ground or during flight, for the Mode A identity code to be displayed to the pilot and modified without the entry or modification of other flight data.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.5.1.4.3 Standard	3.1.2.10.5.1.4.3 For transponders of Level 2 and above, a means shall be provided, while on the ground or during flight, for the aircraft identification to be displayed to the pilot, and, when containing variable data (3.1.2.10.5.1.3 d)), to be modified without the entry or modification of other flight data. <i>Note.— Implementation of the pilot action for entry of data will be as simple and efficient as possible in order to minimize the time required and reduce the possibility of errors in the data entry.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.5.1.4.4 Standard	3.1.2.10.5.1.4.4 Interfaces shall be included to accept the pressure-altitude and on-the-ground coding. <i>Note.— A specific interface design for the variable direct data is not prescribed.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.5.2 Standard	3.1.2.10.5.2 <i>Indirect data</i> <i>Note.— Indirect data are those which pass through the transponder in either direction but which do not affect the surveillance function.</i> If origins and/or destinations of indirect data are not within the transponder's enclosure, interfaces shall be used for the necessary connections.	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 3 Reference 3.1.2.10.5.2.1.1 Standard	3.1.2.10.5.2.1 <i>The function of interfaces</i> <i>Note.— Indirect data interfaces for standard transactions serve interrogations which require a reply and the broadcast function. Indirect data interfaces for ELM serve that system and require buffering and protocol circuitry within the transponder. Interface ports can be separate for each direction and for each service or can be combined in any manner.</i> 3.1.2.10.5.2.1.1 <i>Uplink standard length transaction interface.</i> The uplink standard length transaction interface shall transfer all bits of accepted interrogations, (with the possible exception of the AP field), except for UF = 0, 11 or 16. <i>Note.— AP can also be transferred to aid in integrity implementation.</i>	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.10.5.2.1.2 Standard	3.1.2.10.5.2.1.2 <i>Downlink standard length transaction interface.</i> A transponder which transmits information originating in a peripheral device shall be able to receive bits or bit patterns for insertion at appropriate locations within the transmission. These locations shall not include those into which bit patterns generated internally by the transponder are inserted, nor the AP field of the reply. A transponder which transmits information using the Comm-B format shall have immediate access to requested data in the sense that the transponder shall respond to an interrogation with data requested by that interrogation. <i>Note.— This requirement may be met in two ways:</i> <i>a) the transponder may have provisions for internal data and protocol buffering;</i> <i>b) the transponder may employ a “real time” interface which operates such that uplink data leave the transponder before the corresponding reply is generated and downlink data enter the transponder in time to be incorporated in the reply.</i>	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.10.5.2.2.1 Standard	3.1.2.10.5.2.2 <i>Indirect data transaction rates</i> 3.1.2.10.5.2.2.1 <i>Standard length transactions.</i> A transponder equipped for information transfer to and from external devices shall be capable of processing the data of at least as many replies as prescribed for minimum reply rates in 3.1.2.10.3.7.2 and uplink data from interrogations being delivered at a rate of at least: 50 long interrogations in any 1-second interval 18 long interrogations in a 100-millisecond interval 8 long interrogations in a 25-millisecond interval 4 long interrogations in a 1.6-millisecond interval. <i>Note 1.— A transponder capable of reply rates higher than the minimum of 3.1.2.10.3.7.2 need not accept long interrogations after reaching the uplink data processing limits above.</i> <i>Note 2.— The Mode S reply is the sole means of acknowledging receipt of the data content of a Mode S interrogation. Thus, if the transponder is capable of replying to an interrogation, the Mode S installation must be capable of accepting the data contained in that interrogation regardless of the timing between it and other accepted interrogations. Overlapping Mode S beams from several interrogators could lead to the requirement for considerable data processing and buffering. The minimum described here reduces data processing to a realistic level and the non-acceptance provision provides for notification to the interrogator that data will temporarily not be accepted.</i>	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.10.5.2.2.2 Standard	3.1.2.10.5.2.2.2 <i>Extended length transactions.</i> Level 3 (2.1.5.1.3) and level 4 (2.1.5.1.4) transponders shall be able to transfer data from at least four complete sixteen segment uplink ELMs (3.1.2.7.4) in any four second interval. A level 5 transponder (2.1.5.1.5) shall be able to transfer the data from at least four complete sixteen segment uplink ELMs in any one second interval and shall be capable of accepting at least two complete sixteen segment uplink ELMs with the same II code in a 250 millisecond interval. A level 4 transponder shall be able to transmit at least one four-segment downlink ELM (3.1.2.7.7 and 3.1.2.10.3.7.3) in any one second interval. A level 5 transponder shall be able to transmit at least one sixteen segment downlink ELM in any one second interval.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.5.2.2.2.1 Recommendation	3.1.2.10.5.2.2.2.1 Recommendation. — <i>Level 3 and level 4 transponders should be able to accept at least two complete sixteen segment uplink ELMs in a 250 millisecond interval.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.5.2.3.1 Standard	3.1.2.10.5.2.3 <i>Data formats for standard length transactions and required downlink aircraft parameters (DAPs)</i> 3.1.2.10.5.2.3.1 All level 2 and above transponders shall support the following registers: — the capability reports (3.1.2.6.10.2); — the aircraft identification protocol register 20 {HEX} (3.1.2.9); and — for ACAS-equipped aircraft, the active resolution advisory register 30 {HEX} (4.3.8.4.2.2).	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 3 Reference 3.1.2.10.5.2.3.2 Standard	3.1.2.10.5.2.3.2 Where required, DAPs shall be supported by the registers listed in Table 3-10. The formats and minimum update rates of transponder registers shall be implemented consistently to ensure interoperability.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.5.2.3.3 Standard	3.1.2.10.5.2.3.3 The downlink standard length transaction interface shall deliver downlink aircraft parameters (DAPs) to the transponder which makes them available to the ground. Each DAP shall be packed into the Comm-B format ('MB' field) and can be extracted using either the ground-initiated Comm-B (GICB) protocol, or using MSP downlink channel 3 via the dataflash application. <i>Note.— The formats and update rates of each register and the dataflash application are specified in the Technical Provisions for Mode S Services and Extended Squitter (Doc 9871).</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.5.3 Standard	3.1.2.10.5.3 Integrity of data content transfer. A transponder which employs data interfaces shall include sufficient protection to ensure error rates of less than one error in 103 messages and less than one undetected error in 107 112-bit transmissions in both directions between the antenna and each interface port.	CAR Part 91 Appendix A, A.22.	No Difference		

Report on entire Annex

Chapter 3 Reference 3.1.2.10.5.4 Standard	3.1.2.10.5.4 <i>Message cancellation.</i> The downlink standard length transaction interface and the extended length message interface shall include the capability to cancel a message sent to the transponder for delivery to the ground, but whose delivery cycle has not been completed (i.e. a closeout has not been accomplished by a ground interrogator). <i>Note.— One example of the need for this capability is to cancel a message if delivery is attempted when the aircraft is not within coverage of a Mode S ground station. The message must then be cancelled to prevent it from being read and interpreted as a current message when the aircraft re-enters Mode S airspace.</i>	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.10.5.5 Standard	3.1.2.10.5.5 <i>Air-directed messages.</i> The transfer of this type of message requires all of the actions indicated in 3.1.2.10.5.4 plus the transfer to the transponder of the interrogator identifier of the site that is to receive the message.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 3 Reference 3.1.2.11.1 Standard	3.1.2.11 Essential system characteristics of the ground interrogator <i>Note.— To ensure that Mode S interrogator action is not detrimental to Mode A/C interrogators, performance limits exist for Mode S interrogators.</i> 3.1.2.11.1 <i>Interrogation repetition rates.</i> Mode S interrogators shall use the lowest practicable interrogation repetition rates for all interrogation modes. <i>Note.— Accurate azimuth data at low interrogation rates can be obtained with monopulse techniques.</i>	CAR 171.53(a)(1).	No Difference

Chapter 4 Reference Definition	CHAPTER 4. AIRBORNE COLLISION AVOIDANCE SYSTEM <i>Note 1.— Guidance material relating to the airborne collision avoidance system is contained in the Airborne Collision Avoidance System (ACAS) Manual (Doc 9863).</i> <i>Note 2.— Non-SI alternative units are used as permitted by Annex 5, Chapter 3, 3.2.2. In limited cases, to ensure consistency at the level of the logic calculations, units such as ft/s, NM/s and kt/s are used.</i> <i>Note 3.— The system that is compliant with Chapter 4 in its entirety is the one that incorporates the traffic alert and collision avoidance systems (TCAS) Version 7.1 and therefore meets the RTCA/DO-185B or EUROCAE/ED-143 specification.</i> <i>Note 4.— Equipment complying with RTCA/DO-185A standards (also known as TCAS Version 7.0) is not compliant with Chapter 4 in its entirety.</i> 4.1 DEFINITIONS RELATING TO AIRBORNE COLLISION AVOIDANCE SYSTEM ACAS I. An ACAS which provides information as an aid to “see and avoid” action but does not include the capability for generating resolution advisories (RAs). <i>Note.— ACAS I is not intended for international implementation and standardization by ICAO. Therefore, only ACAS I characteristics required to ensure compatible operation with other ACAS configurations and interference</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		ACAS II equipment carried pursuant to Civil Aviation Rules must meet the requirements of TSO C119b.

	<i>limiting are defined in 4.2.</i>				
Chapter 4 Reference Definition	ACAS II. An ACAS which provides vertical resolution advisories (RAs) in addition to traffic advisories (TAs).	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	ACAS III. An ACAS which provides vertical and horizontal resolution advisories (RAs) in addition to traffic advisories (TAs).	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	ACAS broadcast. A long Mode S air-air surveillance interrogation (UF = 16) with the broadcast address.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Active RAC. An RAC is active if it currently constrains the selection of the RA. RACs that have been received within the last six seconds and have not been explicitly cancelled are active.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference Definition	Altitude crossing RA. A resolution advisory is altitude crossing if own ACAS aircraft is currently at least 30 m (100 ft) below or above the threat aircraft for upward or downward sense advisories, respectively.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Climb RA. A positive RA recommending a climb but not an increased climb.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Closest approach. The occurrence of minimum range between own ACAS aircraft and the intruder. Thus range at closest approach is the smallest range between the two aircraft and time of closest approach is the time at which this occurs.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Coordination. The process by which two ACAS-equipped aircraft select compatible resolution advisories (RAs) by the exchange of resolution advisory complements (RACs).	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Coordination interrogation. A Mode S interrogation (uplink transmission) radiated by ACAS II or III and containing a resolution message.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference Definition	Coordination reply. A Mode S reply (downlink transmission) acknowledging the receipt of a coordination interrogation by the Mode S transponder that is part of an ACAS II or III installation.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Corrective RA. A resolution advisory that advises the pilot to deviate from the current flight path.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Cycle. The term “cycle” used in this chapter refers to one complete pass through the sequence of functions executed by ACAS II or ACAS III, nominally once a second.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Descend RA. A positive RA recommending a descent but not an increased descent.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Established track. A track generated by ACAS air-air surveillance that is treated as the track of an actual aircraft.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference Definition	Increased rate RA. A resolution advisory with a strength that recommends increasing the altitude rate to a value exceeding that recommended by a previous climb or descend RA.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Intruder. An SSR transponder-equipped aircraft within the surveillance range of ACAS for which ACAS has an established track.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Own aircraft. The aircraft fitted with the ACAS that is the subject of the discourse, which ACAS is to protect against possible collisions, and which may enter a manoeuvre in response to an ACAS indication.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Positive RA. A resolution advisory that advises the pilot either to climb or to descend (applies to ACAS II).	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference Definition	Potential threat. An intruder deserving special attention either because of its close proximity to own aircraft or because successive range and altitude measurements indicate that it could be on a collision or near-collision course with own aircraft. The warning time provided against a potential threat is sufficiently small that a traffic advisory (TA) is justified but not so small that a resolution advisory (RA) would be justified.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Preventive RA. A resolution advisory that advises the pilot to avoid certain deviations from the current flight path but does not require any change in the current flight path.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	RA sense. The sense of an ACAS II RA is “upward” if it requires climb or limitation of descent rate and “downward” if it requires descent or limitation of climb rate. It can be both upward and downward simultaneously if it requires limitation of the vertical rate to a specified range. <i>Note.— The RA sense may be both upward and downward when, having several simultaneous threats, ACAS generates an RA aimed at ensuring adequate separation below some threat(s) and above some other threat(s).</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Resolution advisory (RA). An indication given to the flight crew recommending: a) a manoeuvre intended to provide separation from all threats; or b) a manoeuvre restriction intended to maintain existing separation.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference Definition	Resolution advisory complement (RAC). Information provided by one ACAS to another via a Mode S interrogation in order to ensure complementary manoeuvres by restricting the choice of manoeuvres available to the ACAS receiving the RAC.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Resolution advisory complements record (RAC record). A composite of all currently active vertical RACs (VRCs) and horizontal RACs (HRCs) that have been received by ACAS. This information is provided by one ACAS to another ACAS or to a Mode S ground station via a Mode S reply.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Resolution advisory strength. The magnitude of the manoeuvre indicated by the RA. An RA may take on several successive strengths before being cancelled. Once a new RA strength is issued, the previous one automatically becomes void.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Resolution message. The message containing the resolution advisory complement (RAC).	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Reversed sense RA. A resolution advisory that has had its sense reversed.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference Definition	Sensitivity level (S). An integer defining a set of parameters used by the traffic advisory (TA) and collision avoidance algorithms to control the warning time provided by the potential threat and threat detection logic, as well as the values of parameters relevant to the RA selection logic.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Threat. An intruder deserving special attention either because of its close proximity to own aircraft or because successive range and altitude measurements indicate that it could be on a collision or near-collision course with own aircraft. The warning time provided against a threat is sufficiently small that an RA is justified.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Track. A sequence of at least three measurements representing positions that could reasonably have been occupied by an aircraft.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Traffic advisory (TA). An indication given to the flight crew that a certain intruder is a potential threat.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Vertical speed limit (VSL) RA. A resolution advisory advising the pilot to avoid a given range of altitude rates. A VSL RA can be either corrective or preventive.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference Definition	Warning time. The time interval between potential threat or threat detection and closest approach when neither aircraft accelerates.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.2.1 Standard	4.2 ACAS I GENERAL PROVISIONS AND CHARACTERISTICS 4.2.1 <i>Functional requirements.</i> ACAS I shall perform the following functions: a) surveillance of nearby SSR transponder-equipped aircraft; and b) provide indications to the flight crew identifying the approximate position of nearby aircraft as an aid to visual acquisition. <i>Note.— ACAS I is intended to operate using Mode A/C interrogations only. Furthermore, it does not coordinate with other ACAS. Therefore, a Mode S transponder is not required as a part of an ACAS I installation.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.2.2 Standard	4.2.2 <i>Signal format.</i> The RF characteristics of all ACAS I signals shall conform to the provisions of Chapter 3, 3.1.1.1 through 3.1.1.6 and 3.1.2.1 through 3.1.2.4.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference 4.2.3.1 Standard	4.2.3 Interference control 4.2.3.1 <i>Maximum radiated RF power.</i> The effective radiated power of an ACAS I transmission at 0 degree elevation relative to the longitudinal axis of the aircraft shall not exceed 24 dBW.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.2.3.2 Standard	4.2.3.2 <i>Unwanted radiated power.</i> When ACAS I is not transmitting an interrogation, the effective radiated power in any direction shall not exceed -70 dBm. <i>Note.— This requirement is to ensure that, when not transmitting an interrogation, ACAS I does not radiate RF energy that could interfere with, or reduce the sensitivity of, the SSR transponder or radio equipment in other nearby aircraft or ground facilities.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.2.3.3 Standard	4.2.3.3 <i>Interference limiting.</i> Each ACAS I interrogator shall control its interrogation rate or power or both in all SSR modes to minimize interference effects (4.2.3.3.3 and 4.2.3.3.4). <i>Note.— These limits are a means of ensuring that all interference effects resulting from these interrogations, together with the interrogations from all other ACAS I, ACAS II and ACAS III interrogators in the vicinity are kept to a low level.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.2.3.3.1 Standard	4.2.3.3.1 <i>Determination of own transponder reply rate.</i> ACAS I shall monitor the rate that own transponder replies to interrogations to ensure that the provisions in 4.2.3.3.3 are met.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference

Chapter 4 Reference 4.3.2.2.2.2 Standard	4.3.2.2.2.2 <i>ACAS interference limiting inequalities.</i> ACAS shall adjust its interrogation rate and interrogation power such that the following three inequalities remain true, except as provided in 4.3.2.2.2.1. (1) (2) (3) The variables in these inequalities shall be defined as follows: <i>it</i> = number of interrogations (Mode A/C and Mode S) transmitted in a 1 s interrogation cycle. This shall include all Mode S interrogations used by the ACAS functions, including those in addition to $UF = 0$ and $UF = 16$ interrogations, except as provided in 4.3.2.2.2.1; <i>Note.—</i> $UF = 19$ interrogations are included in it as specified in 3.1.2.8.9.4. <i>i</i> = index number for Mode A/C and Mode S interrogations, $i = 1, 2, \dots, it$; α = the minimum of α_1 calculated as $1/4 [nb/nc]$ subject to the special conditions given below and α_2 calculated as $\text{Log}_{10} [na/nb] / \text{Log}_{10} 25$, where nb and nc are defined as the number of operating ACAS II and ACAS III equipped aircraft (airborne or on the ground) within 11.2 km (6 NM) and 5.6 km (3 NM) respectively, of own ACAS (based on ACAS surveillance). ACAS aircraft operating on the ground or at or below a radio altitude of 610 m (2 000 ft) AGL shall include both airborne and on-ground	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B, B.10.	No Difference

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
	ACAS II and ACAS III aircraft in the value for <i>nb</i> and <i>nc</i>. Otherwise, ACAS shall include only airborne ACAS II and ACAS III aircraft in the value for <i>nb</i> and <i>nc</i>. The values of α, α_1 and α_2 are further constrained to a minimum of 0.5 and a maximum of 1.0. In addition; IF $[(nb \leq 1) \text{ OR } (nb \leq 4 \text{ AND } nc \leq 2 \text{ AND } na > 25)]$ THEN $\alpha_1 = 1.0$, IF $[(nc > 2) \text{ AND } (nb > 2 \text{ } nc) \text{ AND } (na < 40)]$ THEN $\alpha_1 = 0.5$; $p(i)$ = peak power radiated from the antenna in all directions of the pulse having the largest amplitude in the group of pulses comprising a single interrogation during the <i>i</i>th interrogation in a 1 s interrogation cycle, W; $m(i)$ = duration of the mutual suppression interval for own transponder associated with the <i>i</i>th interrogation in a 1 s interrogation cycle, s; B = beam sharpening factor (ratio of 3 dB beam width to beamwidth resulting from interrogation side-lobe suppression). For ACAS interrogators that employ transmitter side-lobe suppression (SLS), the appropriate beamwidth shall be the extent in azimuth angle of the Mode A/C replies from one transponder as limited by SLS, averaged over the transponder population; { } see 4.2.3.3.3 $Pa(k)$ "

Chapter 4 Reference 4.3.6.1.3 Standard	4.3.6.1.3 <i>Coordination interrogation.</i> Each cycle ACAS shall transmit a coordination interrogation to each equipped threat, unless generation of an RA is delayed because it is not possible to select an RA that can be predicted to provide adequate separation (4.3.5.1). The resolution message transmitted to a threat shall include an RAC selected for that threat. If an RAC has been received from the threat before ACAS selects an RAC for that threat, the selected RAC shall be compatible with the received RAC unless no more than three cycles have elapsed since the RAC was received, the RAC is altitude-crossing, and own aircraft address is lower in value than that of the threat in which case ACAS shall select its RA independently. If an RAC received from an equipped threat is incompatible with the RAC own ACAS has selected for that threat, ACAS shall modify the selected RAC to be compatible with the received RAC if own aircraft address is higher in value than that of the threat. <i>Note.— The RAC included in the resolution message is in the form of a vertical RAC (VRC) for ACAS II (4.3.8.4.2.3.2.2) and a vertical RAC (VRC) and/or horizontal RAC (HRC) for ACAS III.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.6.1.3.1 Standard	4.3.6.1.3.1 <i>Coordination termination.</i> Within the cycle during which an intruder ceases to be a reason for maintaining the RA, ACAS shall send a resolution message to that intruder by means of a coordination interrogation. The resolution message shall include the cancellation code for the last RAC sent to that intruder while it was a reason for maintaining the RA. <i>Note.— During an encounter with a single threat, the threat ceases to be a reason for the RA when the conditions for cancelling the RA are met. During an encounter with multiple threats, a threat ceases to be a reason for the RA when the conditions for cancelling the RA are met in respect of that threat, even though the RA may have to be maintained because of other threats.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Chapter 4 Reference 4.3.6.1.3.2 Standard	4.3.6.1.3.2 ACAS coordination interrogations shall be transmitted until a coordination reply is received from the threat, up to a maximum of not less than six and not more than twelve attempts. The successive interrogations shall be nominally equally spaced over a period of 100 ±5 ms. If the maximum number of attempts is made and no reply is received, ACAS shall continue its regular processing sequence.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.6.1.3.3 Standard	4.3.6.1.3.3 ACAS shall provide parity protection (4.3.8.4.2.3.2.6 and 4.3.8.4.2.3.2.7) for all fields in the coordination interrogation that convey RAC information. <i>Note.— This includes the vertical RAC (VRC), the cancel vertical RAC (CVC), the horizontal RAC (HRC) and the cancel horizontal RAC (CHC).</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.6.1.3.4 Standard	4.3.6.1.3.4 Whenever own ACAS reverses its sense against an equipped threat, the resolution message that is sent on the current and subsequent cycles to that threat shall contain both the newly selected RAC and the cancellation code for the RAC sent before the reversal.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.6.1.3.5 Standard	4.3.6.1.3.5 When a vertical RA is selected, the vertical RAC (VRC) (4.3.8.4.2.3.2.2) that own ACAS includes in a resolution message to the threat shall be as follows: a) “do not pass above” when the RA is intended to provide separation above the threat; b) “do not pass below” when the RA is intended to provide separation below the threat.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference

Chapter 4 Reference 4.3.6.1.4 Standard	4.3.6.1.4 <i>Resolution message processing.</i> Resolution messages shall be processed in the order in which they are received and with delay limited to that required to prevent possible concurrent access to stored data and delays due to the processing of previously received resolution messages. Resolution messages that are being delayed shall be temporarily queued to prevent possible loss of messages. Processing a resolution message shall include decoding the message and updating the appropriate data structures with the information extracted from the message. <i>Note.— According to 4.3.6.1.2, resolution message processing must not access any data whose usage is not protected by the coordination lock state.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.6.1.4.1 Standard	4.3.6.1.4.1 An RAC or an RAC cancellation received from another ACAS shall be rejected if the encoded sense bits indicate the existence of a parity error or if undefined value(s) are detected in the resolution message. An RAC or an RAC cancellation received without parity errors and without undefined resolution message values shall be considered valid.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.6.1.4.2 Standard	4.3.6.1.4.2 <i>RAC storage.</i> A valid RAC received from another ACAS shall be stored or shall be used to update the previously stored RAC corresponding to that ACAS. A valid RAC cancellation shall cause the previously stored RAC to be deleted. A stored RAC that has not been updated for an interval of 6 s shall be deleted.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.6.1.4.3 Standard	4.3.6.1.4.3 <i>RAC record update.</i> A valid RAC or RAC cancellation received from another ACAS shall be used to update the RAC record. If a bit in the RAC record has not been refreshed for an interval of 6 s by any threat, that bit shall be set to 0.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference

Chapter 4 Reference 4.3.7.1.2.2 Standard	4.3.7.1.2.2 <i>Surveillance interrogations.</i> On first receipt of a 24-bit aircraft address from an aircraft that is determined to be within the reliable surveillance range of ACAS based on reception reliability and that is within an altitude band 3 050 m (10 000 ft) above and below own aircraft, ACAS shall transmit a short air-air interrogation (UF = 0) for range acquisition. Surveillance interrogations shall be transmitted at least once every five cycles when this altitude condition is satisfied. Surveillance interrogations shall be transmitted each cycle if the range of the detected aircraft is less than 5.6 km (3 NM) or the calculated time to closest approach is less than 60 s, assuming that both the detected and own aircraft proceed from their current positions with unaccelerated motion and that the range at closest approach equals 5.6 km (3 NM). Surveillance interrogations shall be suspended for a period of five cycles if: a) a reply was successfully received; and b) own aircraft and intruder aircraft are operating below a pressure-altitude of 5 490 m (18 000 ft); and c) the range of the detected aircraft is greater than 5.6 km (3 NM) and the calculated time to closest approach exceeds 60 seconds, assuming that both the detected and own aircraft proceed from their current positions with unaccelerated motion and that the range at closest approach equals 5.6 km (3 NM).	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference

Chapter 4 Reference 4.3.8.4.2.2.1.5 Standard	4.3.8.4.2.2.1.5 <i>TTI (threat type indicator subfield)</i> . This 2-bit subfield (61-62) shall define the type of identity data contained in the TID subfield.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.2.1.6 Standard	4.3.8.4.2.2.1.6 <i>TID (threat identity data subfield)</i> . This 26-bit subfield (63-88) shall contain the Mode S address of the threat or the altitude, range, and bearing if the threat is not Mode S equipped. If two or more threats are simultaneously processed by the ACAS resolution logic, TID shall contain the identity or position data for the most recently declared threat. If TTI = 1, TID shall contain in bits 63-86 the aircraft address of the threat, and bits 87 and 88 shall be set to 0. If TTI = 2, TID shall contain the following three subfields.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.2.1.6.1 Standard	4.3.8.4.2.2.1.6.1 <i>TIDA (threat identity data altitude subfield)</i> . This 13-bit subfield (63-75) shall contain the most recently reported Mode C altitude code of the threat.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.2.1.6.2 Standard	4.3.8.4.2.2.1.6.2 <i>TIDR (threat identity data range subfield)</i> . This 7-bit subfield (76-82) shall contain the most recent threat range estimated by ACAS.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference 4.3.8.4.2.2.1.6.3 Standard	4.3.8.4.2.2.1.6.3 <i>TIDB (threat identity data bearing subfield)</i> . This 6-bit subfield (83-88) shall contain the most recent estimated bearing of the threat aircraft, relative to the ACAS aircraft heading. <i>Note.— Structure of MB for an RA report:</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B, B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.2.2 Standard	4.3.8.4.2.2.2 <i>Subfields in MB for the data link capability report</i> . When BDS1 = 1 and BDS2 = 0, the following bit patterns shall be provided to the transponder for its data link capability report: <i>Note 1.— A summary of the MB subfields for the data link capability report structure is described in Chapter 3, 3.1.2.6.10.2.2.</i> <i>Note 2.— The use of hybrid surveillance to limit ACAS active interrogations is described in 4.5.1. The ability only to support decoding of DF = 17 extended squitter messages is not sufficient to set bit 69.</i> <i>Note 3.— Future versions of ACAS will be identified using part numbers and software version numbers specified in registers E516 and E616.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B, B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.3 Standard	4.3.8.4.2.3 <i>MU field</i> . This 56-bit (33-88) field of long air-air surveillance interrogations (Figure 4-1) shall be used to transmit resolution messages, ACAS broadcasts and RA broadcasts.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B, B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference 4.3.8.4.2.3.1 Standard	4.3.8.4.2.3.1 <i>UDS (U-definition subfield)</i> . This 8-bit (33-40) subfield shall define the remainder of MU. <i>Note.— For convenience in coding, UDS is expressed in two groups of four bits each, UDS1 and UDS2.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.3.2 Standard	4.3.8.4.2.3.2 <i>Subfields in MU for a resolution message</i> . When UDS1 = 3 and UDS2 = 0 the following subfields shall be contained in MU:	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.3.2.1 Standard	4.3.8.4.2.3.2.1 <i>MTB (multiple threat bit)</i> . This 1-bit (42) subfield shall indicate the presence or absence of multiple threats.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.3.2.2 Standard	4.3.8.4.2.3.2.2 <i>VRC (vertical RAC)</i> . This 2-bit (45-46) subfield shall denote a vertical RAC relating to the addressed aircraft.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.3.2.3 Standard	4.3.8.4.2.3.2.3 <i>CVC (cancel vertical RAC)</i> . This 2-bit (43-44) subfield shall denote the cancellation of a vertical RAC previously sent to the addressed aircraft. This subfield shall be set to 0 for a new threat.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Chapter 4 Reference 4.3.8.4.2.3.2.4 Standard	4.3.8.4.2.3.2.4 <i>HRC (horizontal RAC)</i> . This 3-bit (50-52) subfield shall denote a horizontal RAC relating to the addressed aircraft.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.3.2.5 Standard	4.3.8.4.2.3.2.5 <i>CHC (cancel horizontal RAC)</i> . This 3-bit (47-49) subfield shall denote the cancellation of a horizontal RAC previously sent to the addressed aircraft. This subfield shall be set to 0 for a new threat.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.3.2.6 Standard	4.3.8.4.2.3.2.6 <i>VSB (vertical sense bits subfield)</i> . This 4-bit (61-64) subfield shall be used to protect the data in the CVC and VRC subfields. For each of the 16 possible combinations of bits 43-46 the following VSB code shall be transmitted: <i>Note.— The rule used to generate the VSB subfield bit setting is a distance 3 Hamming code augmented with a parity bit, producing the ability to detect up to three errors in the eight transmitted bits.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference 4.3.8.4.2.3.2.7 Standard	4.3.8.4.2.3.2.7 <i>HSB (horizontal sense bits subfield)</i> . This 5-bit (56-60) subfield shall be used to protect the data in the CHC and HRC subfields. For each of the 64 possible combinations of bits 47-52 the following HSB code shall be transmitted: <i>Note.— The rule used to generate the HSB subfield bit setting is a distance 3 Hamming code augmented with a parity bit, producing the ability to detect up to three errors in the eleven transmitted bits.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.3.2.8 Standard	4.3.8.4.2.3.2.8 <i>MID (Aircraft address)</i> . This 24-bit (65-88) subfield shall contain the 24-bit aircraft address of the interrogating ACAS aircraft. <i>Note.— Structure of MU for a resolution message:</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.3.3 Standard	4.3.8.4.2.3.3 <i>Subfield in MU for an ACAS broadcast</i> . When UDS1 = 3 and UDS2 = 2, the following subfield shall be contained in MU:	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.3.3.1 Standard	4.3.8.4.2.3.3.1 <i>MID (Aircraft address)</i> . This 24-bit (65-88) subfield shall contain the 24-bit aircraft address of the interrogating ACAS aircraft. <i>Note.— Structure of MU for an ACAS broadcast:</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference

Chapter 4 Reference 4.3.8.4.2.4.2.1 Standard	4.3.8.4.2.4.2.1 <i>ARA (active RAs)</i> . This 14-bit (41-54) subfield shall be coded as defined in 4.3.8.4.2.2.1.1.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.4.2.2 Standard	4.3.8.4.2.4.2.2 <i>RAC (RACs record)</i> . This 4-bit (55-58) subfield shall be coded as defined in 4.3.8.4.2.2.1.2.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.4.2.3 Standard	4.3.8.4.2.4.2.3 <i>RAT (RA terminated indicator)</i> . This 1-bit (59) subfield shall be coded as defined in 4.3.8.4.2.2.1.3.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.4.2.4 Standard	4.3.8.4.2.4.2.4 <i>MTE (multiple threat encounter)</i> . This 1-bit (60) subfield shall be coded as defined in 4.3.8.4.2.2.1.4. <i>Note.— Structure of MV for a coordination reply:</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.8.4.2.5 Standard	4.3.8.4.2.5 <i>SL (sensitivity level report)</i> . This 3-bit (9-11) downlink field shall be included in both short and long air-air reply formats (DF = 0 and 16). This field shall denote the sensitivity level at which ACAS is currently operating.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference 4.3.8.4.2.6 Standard	4.3.8.4.2.6 <i>CC: Cross-link capability.</i> This 1-bit (7) downlink field shall indicate the ability of the transponder to support the cross-link capability, i.e. decode the contents of the DS field in an interrogation with UF equals 0 and respond with the contents of the specified GICB register in the corresponding reply with DF equals 16.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B, B.10.	No Difference		
Chapter 4 Reference 4.3.9.1 Standard	4.3.9 ACAS equipment characteristics 4.3.9.1 <i>Interfaces.</i> As a minimum, the following input data shall be provided to the ACAS: a) aircraft address code; b) air-air and ground-air Mode S transmissions received by the Mode S transponder for use by ACAS (4.3.6.3.2); c) own aircraft's maximum cruising true airspeed capability (Chapter 3, 3.1.2.8.2.2); d) pressure-altitude; and e) radio altitude. <i>Note.— Specific requirements for additional inputs for ACAS II and III are listed in the appropriate sections below.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B, B.10.	No Difference		
Chapter 4 Reference 4.3.9.2 Standard	4.3.9.2 <i>Aircraft antenna system.</i> ACAS shall transmit interrogations and receive replies via two antennas, one mounted on the top of the aircraft and the other on the bottom of the aircraft. The top-mounted antenna shall be directional and capable of being used for direction finding.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B, B.10.	No Difference		

Report on entire Annex

Chapter 4 Reference 4.3.9.2.1 Standard	4.3.9.2.1 <i>Polarization.</i> Polarization of ACAS transmissions shall be nominally vertical.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.9.2.2 Standard	4.3.9.2.2 <i>Radiation pattern.</i> The radiation pattern in elevation of each antenna when installed on an aircraft shall be nominally equivalent to that of a quarter-wave monopole on a ground plane.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.9.2.3.1 Standard	4.3.9.2.3 <i>Antenna selection</i> 4.3.9.2.3.1 <i>Squitter reception.</i> ACAS shall be capable of receiving squitters via the top and bottom antennas.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.9.2.3.2 Standard	4.3.9.2.3.2 <i>Interrogations.</i> ACAS interrogations shall not be transmitted simultaneously on both antennas.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.9.3 Standard	4.3.9.3 <i>Pressure-altitude source.</i> The altitude data for own aircraft provided to ACAS shall be obtained from the source that provides the basis for own Mode C or Mode S reports and they shall be provided at the finest quantization available.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference

Chapter 4 Reference 4.3.11.3.2 Standard	4.3.11.3.2 <i>Coordination reply.</i> The ACAS Mode S transponder shall transmit a coordination reply upon receipt of a coordination interrogation from an equipped threat subject to the conditions of 4.3.11.3.2.1. The coordination reply shall use the long air-air surveillance reply format, DF = 16, with the VS field as specified in Chapter 3, 3.1.2.8.2, the RI field as specified in Chapter 3, 3.1.2.8.2 and in 4.3.8.4.1.2, the SL field as specified in 4.3.8.4.2.5 and the MV field as specified in 4.3.8.4.2.4.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.11.3.2.1 Standard	4.3.11.3.2.1 The ACAS Mode S transponder shall reply with a coordination reply to a coordination interrogation received from another ACAS if and only if the transponder is able to deliver the ACAS data content of the interrogation to its associated ACAS.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference 4.3.11.4.1 Standard	4.3.11.4 Communication of ACAS information to ground stations 4.3.11.4.1 <i>RA reports to Mode S ground stations.</i> During the period of an RA and for 18±1 s following the end of the RA, the ACAS Mode S transponder shall indicate that it has an RA report by setting the appropriate DR field code in replies to a Mode S sensor as specified in 4.3.8.4.1.1. The RA report shall include the MB field as specified in 4.3.8.4.2.2.1. The RA report shall describe the most recent RA that existed during the preceding 18±1 s period. <i>Note 1.— The last sentence of 4.3.11.4.1 means that for 18±1 s following the end of an RA, all MB subfields in the RA report with the exception of bit 59 (RA terminated indicator) will retain the information reported at the time the RA was last active.</i> <i>Note 2.— Upon receipt of a reply with DR = 2, 3, 6 or 7, a Mode S ground station may request downlink of the RA report by setting RR = 19 and either DI = 7, or DI = 7 and RRS = 0 in a surveillance or Comm-A interrogation to the ACAS aircraft. When this interrogation is received, the transponder replies with a Comm-B reply whose MB field contains the RA report.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.3.11.4.2 Standard	4.3.11.4.2 <i>Data link capability report.</i> The presence of an ACAS shall be indicated by its Mode S transponder to a ground station in the Mode S data link capability report. <i>Note.— This indication causes the transponder to set codes in a data link capability report as specified in 4.3.8.4.2.2.2.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference

Chapter 4 Reference Definition	4.4 PERFORMANCE OF THE ACAS II COLLISION AVOIDANCE LOGIC <i>Note.— Caution is to be observed when considering potential improvements to the reference ACAS II system described in Section 3.17 of the Airborne Collision Avoidance System (ACAS) Manual (Doc 9863) since changes may affect more than one aspect of the system performance. It is essential that alternative designs would not degrade the performances of other designs and that such compatibility is demonstrated with a high degree of confidence.</i> 4.4.1 Definitions relating to the performance of the collision avoidance logic <i>Note.— The notation $[t1, t2]$ is used to indicate the interval between $t1$ and $t2$.</i> Altitude layer. Each encounter is attributed to one of six altitude layers as follows: The altitude layer of an encounter is determined by the average altitude of the two aircraft at closest approach. <i>Note.— For the purposes of defining the performance of the collision avoidance logic, there is no need to specify the physical basis of the altitude measurement or the relationship between altitude and ground level.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference Definition	Approach angle. The difference in the ground headings of the two aircraft at closest approach, with 180 degrees defined as head on and 0 degrees defined as parallel.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Crossing encounter. An encounter in which the altitude separation of the two aircraft exceeds 100 ft at the beginning and at the end of the encounter window, and the relative vertical position of two aircraft at the end of the encounter window is reversed from that at the beginning of the encounter window.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Encounter. For the purposes of defining the performance of the collision avoidance logic, an encounter consists of two simulated aircraft trajectories. The horizontal coordinates of the aircraft represent the actual position of the aircraft but the vertical coordinate represents an altimeter measurement of altitude.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Encounter class. Encounters are classified according to whether or not the aircraft are transitioning at the beginning and end of the encounter window, and whether or not the encounter is crossing.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Encounter window. The time interval [$tca - 40$ s, $tca + 10$ s].	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference Definition	Horizontal miss distance (hmd). The minimum horizontal separation observed in an encounter.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Level aircraft. An aircraft that is not transitioning.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Original trajectory. The original trajectory of an ACAS-equipped aircraft is that followed by the aircraft in the same encounter when it was not ACAS equipped.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Original rate. The original rate of an ACAS-equipped aircraft at any time is its altitude rate at the same time when it followed the original trajectory.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Required rate. For the standard pilot model, the required rate is that closest to the original rate consistent with the RA.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference Definition	tca. Nominally, the time of closest approach. For encounters in the standard encounter model (4.4.2.6), a reference time for the construction of the encounter at which various parameters, including the vertical and horizontal separation (<i>vmd</i> and <i>hmd</i>), are specified. <i>Note.— Encounters in the standard encounter model (4.4.2.6) are constructed by building the trajectories of the two aircraft outwards starting at tca. When the process is complete, tca may not be the precise time of closest approach and differences of a few seconds are acceptable.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Transitioning aircraft. An aircraft having an average vertical rate with a magnitude exceeding 400 feet per minute (ft/min), measured over some period of interest.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Turn extent. A heading difference defined as an aircraft's ground heading at the end of a turn minus its ground heading at the beginning of the turn.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference Definition	Vertical miss distance (vmd). Notionally, the vertical separation at closest approach. For encounters in the standard encounter model (4.4.2.6), by construction the vertical separation at the time <i>tca</i> .	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference 4.4.2.1 Standard	4.4.2 Conditions under which the requirements apply 4.4.2.1 The following assumed conditions shall apply to the performance requirements specified in 4.4.3 and 4.4.4: a) range and bearing measurements and an altitude report are available for the intruder each cycle as long as it is within 14 NM, but not when the range exceeds 14 NM; b) the errors in the range and bearing measurements conform to standard range and bearing error models (4.4.2.2 and 4.4.2.3); c) the intruder's altitude reports, which are its Mode C replies, are expressed in 100 ft quanta; d) an altitude measurement that has not been quantized and is expressed with a precision of 1 ft or better is available for own aircraft; e) errors in the altitude measurements for both aircraft are constant throughout any particular encounter; f) the errors in the altitude measurements for both aircraft conform to a standard altimetry error model (4.4.2.4); g) the pilot responses to RAs conform to a standard pilot model (4.4.2.5); h) the aircraft operate in an airspace in which close encounters, including those in which ACAS generates an RA, conform to a standard encounter model (4.4.2.6); i) ACAS-equipped aircraft are not limited in their ability	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
	to perform the manoeuvres required by their RAs; and j) as specified in 4.4.2.7: 1) the intruder involved in each encounter is not equipped (4.4.2.7 a)); or 2) the intruder is ACAS-equipped but follows a trajectory identical to that in the unequipped encounter (4.4.2.7 b)); or 3) the intruder is equipped with an ACAS having a collision avoidance logic identical to that of own ACAS (4.4.2.7 c)). <i>Note.— The phrase “altitude measurement” refers to a measurement by an altimeter prior to any quantization.</i>				
Chapter 4 Reference 4.4.2.1.1 Standard	4.4.2.1.1 The performance of the collision avoidance logic shall not degrade abruptly as the statistical distribution of the altitude errors or the statistical distributions of the various parameters that characterize the standard encounter model or the response of pilots to the advisories are varied, when surveillance reports are not available on every cycle or when the quantization of the altitude measurements for the intruder is varied or the altitude measurements for own aircraft are quantized.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.4.2.2 Standard	4.4.2.2 Standard range error model The errors in the simulated range measurements shall be taken from a Normal distribution with mean 0 ft and standard deviation 50 ft.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference

Chapter 4 Reference 4.4.2.3 Standard	4.4.2.3 Standard bearing error model The errors in the simulated bearing measurements shall be taken from a Normal distribution with mean 0.0 degrees and standard deviation 10.0 degrees.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.4.2.4.1 Standard	4.4.2.4 Standard altimetry error model 4.4.2.4.1 The errors in the simulated altitude measurements shall be assumed to be distributed as a Laplacian distribution with zero mean having probability density	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.4.2.4.2 Standard	4.4.2.4.2 The parameter λ required for the definition of the statistical distribution of altimeter error for each aircraft shall have one of two values, λ_1 and λ_2 , which depend on the altitude layer of the encounter as follows:	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.4.2.4.3 Standard	4.4.2.4.3 For an aircraft equipped with ACAS the value of λ shall be λ_1 .	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference

Chapter 4 Reference 4.4.2.6.1.1.2 Standard	4.4.2.6.1.1.2 The two aircraft trajectories in each encounter shall be constructed with the following randomly selected characteristics: a) in the vertical plane: 1) a <i>vmd</i> from within the appropriate <i>vmd</i> bin; 2) a vertical rate for each aircraft at the beginning of the encounter window, z_1, and at the end of the encounter window, z_2; 3) a vertical acceleration; and 4) a start time for the vertical acceleration; and b) and in the horizontal plane: 1) an <i>hmd</i>; 2) an approach angle; 3) a speed for each aircraft at closest approach; 4) a decision for each aircraft whether or not it turns; 5) the turn extent; the bank angle; and the turn end time; 6) a decision for each aircraft whether or not its speed changes; and 7) the magnitude of the speed change. <i>Note.— It is possible for the selections made for the various characteristics of an encounter to be irreconcilable.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
	<i>When this occurs, the problem can be resolved by discarding either the selection for a particular characteristic or the whole encounter, as most appropriate.</i>				
Chapter 4 Reference 4.4.2.6.1.3 Standard	4.4.2.6.1.3 Two models shall be used for the statistical distribution of <i>hmd</i> (4.4.2.6.4.1). For calculations of the effect of ACAS on the risk of collision (4.4.3), <i>hmd</i> shall be constrained to be less than 500 ft. For calculations of the compatibility of ACAS with ATM (4.4.4), <i>hmd</i> shall be selected from a larger range of values (4.4.2.6.4.1.2). <i>Note.— 4.4.2.6.2 and 4.4.2.6.3 specify vertical characteristics for the aircraft trajectories in the standard encounter model that depend on whether the hmd is constrained to be small ("for calculating risk ratio") or can take larger values ("for ATM compatibility"). Otherwise, the characteristics of the encounters in the vertical and horizontal planes are independent.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.4.2.6.2.1 Standard	4.4.2.6.2 <i>Encounter classes and weights</i> 4.4.2.6.2.1 <i>Aircraft address.</i> Each aircraft shall be equally likely to have the higher aircraft address.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.4.2.6.2.2 Standard	4.4.2.6.2.2 <i>Altitude layers.</i> The relative weights of the altitude layers shall be as follows:	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference 4.4.2.6.2.3.1 Standard	4.4.2.6.2.3 <i>Encounter classes</i> 4.4.2.6.2.3.1 The encounters shall be classified according to whether the aircraft are level (L) or transitioning (T) at the beginning (before <i>tca</i>) and end (after <i>tca</i>) of the encounter window and whether or not the encounter is crossing, as follows:	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.4.2.6.2.3.2 Standard	4.4.2.6.2.3.2 The relative weights of the encounter classes shall depend on layer as follows:	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.4.2.6.2.4.1 Standard	4.4.2.6.2.4 <i>vmd bins</i> 4.4.2.6.2.4.1 The <i>vmd</i> of each encounter shall be taken from one of ten <i>vmd</i> bins for the non-crossing encounter classes, and from one of nine or ten <i>vmd</i> bins for the crossing encounter classes. Each <i>vmd</i> bin shall have an extent of 100 ft for calculating risk ratio, or an extent of 200 ft for calculating compatibility with ATM. The maximum <i>vmd</i> shall be 1 000 ft for calculating risk ratio, and 2 000 ft otherwise.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.4.2.6.2.4.2 Standard	4.4.2.6.2.4.2 For non-crossing encounter classes, the relative weights of the <i>vmd</i> bins shall be as follows: <i>Note.— The weights for the vmd bins do not sum to 1.0. The weights specified are based on an analysis of encounters captured in ATC ground radar data. The missing proportion reflects the fact that the encounters captured included some with vmd exceeding the maximum vmd in the model.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference

Chapter 4 Reference 4.4.2.6.2.4.3 Standard	4.4.2.6.2.4.3 For the crossing classes, the relative weights of the <i>vmd</i> bins shall be as follows: <i>Note.— For the crossing classes, vmd must exceed 100 ft so that the encounter qualifies as a crossing encounter. Thus, for the calculation of risk ratio there is no vmd bin 1, and for calculations of the compatibility with ATM vmd bin 1 is limited to [100 ft, 200 ft].</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.4.2.6.3.1 Standard	4.4.2.6.3 <i>Characteristics of the aircraft trajectories in the vertical plane</i> 4.4.2.6.3.1 <i>vmd</i> . The <i>vmd</i> for each encounter shall be selected randomly from a distribution that is uniform in the interval covered by the appropriate <i>vmd</i> bin.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.4.2.6.3.2.1 Standard	4.4.2.6.3.2 <i>Vertical rate</i> 4.4.2.6.3.2.1 For each aircraft in each encounter, either the vertical rate shall be constant ($\dot{z}$) or the vertical trajectory shall be constructed so that the vertical rate at $tca - 35$ s is $\dot{z}1$ and the vertical rate at $tca + 5$ s is $\dot{z}2$. Each vertical rate, $\dot{z}$, $\dot{z}1$ or $\dot{z}2$, shall be determined by first selecting randomly an interval within which it lies and then selecting the precise value from a distribution that is uniform over the interval selected.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference		
Chapter 4 Reference 4.4.2.6.3.2.2 Standard	4.4.2.6.3.2.2 The intervals within which the vertical rates lie shall depend on whether the aircraft is level, i.e. marked "L" in 4.4.2.6.2.3.1, or transitioning, i.e. marked "T" in 4.4.2.6.2.3.1, and shall be as follows:	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B,B.10.	No Difference

	5) the reported SDA = 2 or 3; and 6) the barometric altitude is valid.				
Chapter 4 Reference 4.5.1.3.1.3 Standard	4.5.1.3.1.3 A track maintained under extended hybrid surveillance mode shall transition to a track maintained under active surveillance mode if range and altitude of hybrid threat criteria are met. <i>Note.— Information concerning range and altitude hybrid threat criteria can be found in RTCA DO-300A Change 1/EUROCAE ED-221A – Minimum Operational Performance Standards (MOPS) for Traffic Alert and Collision Avoidance System II (TCAS II) Hybrid Surveillance.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B, B.10.	No Difference		
Chapter 4 Reference 4.5.1.3.1.4 Standard	4.5.1.3.1.4 A track under extended hybrid surveillance mode shall transition to a track under hybrid surveillance mode, if: a) the signal indicates a high probability to be in close proximity, i.e. signal > extended hybrid surveillance MTL, except when operating on the airport surface; or b) intruder data or own data quality does not meet minimum requirements.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B, B.10.	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 4 Reference 4.5.1.3.2 Standard	4.5.1.3.2 <i>Validation.</i> To validate the position of an intruder reported by extended squitter and not meeting the criteria for extended hybrid surveillance mode, ACAS shall determine the relative range and relative bearing as computed from the position and geographical heading of own aircraft and the intruder's position as reported in the extended squitter. This derived range and relative bearing and the altitude reported in the squitter shall be compared to the range, relative bearing and altitude determined by active ACAS interrogation requiring a short reply from the aircraft. Differences between the derived and measured range and relative bearing and the squitter and reply altitude shall be computed and used in tests to determine whether the extended squitter data is valid. If these tests are satisfied the passive position shall be considered to be validated and the track shall be maintained on passive data unless it is a near threat as described in 4.5.1.4. If any of these validation tests fail, active surveillance shall be used to track the intruder. <i>Note.— Suitable tests for validating extended squitter data information for the purposes of ACAS hybrid surveillance can be found in RTCA DO-300A Change 1/EUROCAE ED-221A – Minimum Operational Performance Standards (MOPS) for Traffic Alert and Collision Avoidance System II (TCAS II) Hybrid Surveillance.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B, B.10.	No Difference		
Chapter 4 Reference 4.5.1.3.3 Standard	4.5.1.3.3 <i>Supplementary active interrogations.</i> In order to ensure that an intruder's track is updated at least as frequently as required in the absence of extended squitter data (4.3.7.1.2.2), each time a track is updated using squitter information the time at which an active interrogation would next be required shall be calculated. An active interrogation shall be made at that time if a further squitter has not been received before the interrogation is due.	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B, B.10.	No Difference

Chapter 4 Reference 4.5.1.4 Standard	4.5.1.4 <i>Near threat.</i> An intruder shall be tracked under active surveillance if it is a near threat, as determined by separate tests on the range and altitude of the aircraft. These tests shall be such that an intruder is considered a near threat before it becomes a potential threat, and thus triggers a traffic advisory as described in 4.3.3. These tests shall be performed once per second. All near threats, potential threats and threats shall be tracked using active surveillance. <i>Note.— Suitable tests for determining that an intruder is a near threat can be found in RTCA DO-300A Change 1/EUROCAE ED-221A – Minimum Operational Performance Standards (MOPS) for Traffic Alert and Collision Avoidance System II (TCAS II) Hybrid Surveillance.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B, B.10.	No Difference		
Chapter 4 Reference 4.5.1.5 Standard	4.5.1.5 <i>Revalidation and monitoring.</i> If an aircraft is being tracked using passive surveillance and if criteria for extended hybrid surveillance mode are not met, periodic active interrogations shall be performed to validate and monitor the extended squitter data as required in 4.5.1.3.2. The rates of revalidation shall be between once per minute and once per 10 seconds. The tests required in 4.5.1.3.2 shall be performed for each interrogation, and active surveillance shall be used to track the intruder if these revalidation tests fail. <i>Note.— More information about criteria of revalidation rate can be found in RTCA DO-300A Change 1/EUROCAE ED-221A – Minimum Operational Performance Standards (MOPS) for Traffic Alert and Collision Avoidance System II (TCAS II) Hybrid Surveillance.</i>	CAR Part 121 Appendix B, B.11; CAR Part 125 Appendix B, B.10.	No Difference

Chapter 5 Reference 5.1.1.1 Standard	CHAPTER 5. MODE S EXTENDED SQUITTER <i>Note 1.— A functional model of Mode S extended squitter systems supporting ADS-B and/or TIS-B is depicted in Figure 5-1.</i> <i>Note 2.— Airborne systems transmit ADS-B messages (ADS-B OUT) and may also receive ADS-B and TIS-B messages (ADS-B IN and TIS-B IN). Ground systems (i.e. ground stations) transmit TIS-B (as an option) and receive ADS-B messages.</i> <i>Note 3.— Although not explicitly depicted in the functional model presented in Figure 5-1, extended squitter systems installed on aerodrome surface vehicles or fixed obstacles may transmit ADS-B messages (ADS-B OUT).</i> 5.1 MODE S EXTENDED SQUITTER TRANSMITTING SYSTEM CHARACTERISTICS <i>Note.— Many of the requirements associated with the transmission of Mode S extended squitter are included in Chapter 2 and Chapter 3 for Mode S transponder and non-transponder devices using the message formats defined in the Technical Provisions for Mode S Services and Extended Squitter (Doc 9871). The provisions presented within the following subsections are focused on requirements applicable to specific classes of airborne and ground transmitting systems that are supporting the applications of ADS-B and TIS-B.</i>	CAR Part 91 Appendix A, A.22. Chapter 5 Reference 5.2.3.3.1 Standard	5.2.3.3 ADS-B Report types <i>Note 1.— The ADS-B report refers to the restructuring of ADS-B message data received from Mode S extended squitter broadcasts into various reports that can be used directly by a set of client applications. Five ADS-B report types are defined by the following subparagraphs for output to client applications. Additional information on the ADS-B report contents and the applicable mapping from extended squitter messages to ADS-B reports can be found in the Technical Provisions for Mode S Services and Extended Squitter (Doc 9871) and RTCA DO-260B / EUROCAE ED-102A.</i> <i>Note 2.— The use of precision (e.g. GNSS UTC measured time) versus non-precision (e.g. internal receiving system clock) time sources as the basis for the reported time of applicability is described in 5.2.3.5.</i> 5.2.3.3.1 <i>State vector report.</i> The state vector report shall contain time of applicability, information about an airborne or vehicle's current kinematic state (e.g. position, velocity), as well as a measure of the integrity of the navigation data, based on information received in airborne or ground position, airborne velocity, identification and category, aircraft operational status and target state and status extended squitter messages. Since separate messages are used for position and velocity, the time of applicability shall be reported individually for the position related report parameters and the velocity related report parameters. Also, the state vector report shall include a time of applicability for the estimated position and/or estimated velocity information (i.e. not based on a message with updated position or velocity information) when such estimated position and/or velocity information is included in the state vector report. <i>Note.— Specific requirements for the customization of this type of report may vary according to the needs of the client applications of each participant (ground or</i>	CAR Part 91 Appendix A, A.22; CAR 171.53(a)(1). Chapter 5 Reference 5.2.3.3.3 Standard	5.2.3.3.3 <i>Air referenced velocity report.</i> Air referenced velocity reports shall be generated when air referenced velocity information is received in airborne velocity extended squitter messages. The air referenced velocity report shall contain time of applicability, airspeed and heading information. Only certain classes of extended squitter receiving systems, as defined in 5.2.3.5, are required to generate air referenced velocity reports. Each time that an individual mode status report is generated, the report assembly function shall update the report time of applicability. <i>Note 1.— The air referenced velocity report contains velocity information that is received in airborne velocity messages along with additional information received in airborne identification and category extended squitter messages. Air referenced velocity reports are not generated when ground referenced velocity information is being received in the airborne velocity extended squitter messages.</i> <i>Note 2.— Specific requirements for the customization of this type of report may vary according to the needs of the client applications of each participant (ground or airborne).</i>	CAR Part 91 Appendix A, A.22; CAR 171.53(a)(1).	No Difference		
Chapter 5 Reference 5.2.3.3.4 Standard	5.2.3.3.4 <i>Resolution advisory (RA) report.</i> The RA report shall contain time of applicability and the contents of an active ACAS resolution advisory (RA) as received in a Type=28 and Subtype=2 extended squitter message. <i>Note.— The RA report is only intended to be generated by ground receiving subsystems when supporting a ground ADS-B client application(s) requiring active RA information. An RA report will nominally be generated each time a Type=28, Subtype=2 extended squitter message is received.</i>	CAR Part 91 Appendix A, A.22; CAR 171.53(a)(1).	No Difference

Chapter 5 Reference 5.2.3.4.3 Standard	5.2.3.4.3 When a TIS-B position message is received, it is compared with tracks to determine whether it can be decoded into target position (i.e. correlated to an existing track). If the message is decoded into target position, a report shall be generated within 0.5 seconds. The report shall contain the received position information with a time of applicability, the most recently received velocity measurement with a time of applicability, the estimated position and velocity applicable to a common time of applicability, airborne/vehicle address, and all other information in the received message. The estimated values shall be based on the received position information and the track history of the target.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 5 Reference 5.2.3.4.4 Standard	5.2.3.4.4 When a TIS-B velocity message is received, if it is correlated to a complete track, a report shall be generated, within 0.5 seconds of the message reception. The report shall contain the received velocity information with a time of applicability, the estimated position and velocity applicable to a common time of applicability, airborne/vehicle address, and all other information in the received message. The estimated values shall be based on the received ground reference velocity information and the track history of the target.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 5 Reference 5.2.3.4.5 Standard	5.2.3.4.5 <i>TIS-B management report.</i> The entire message content of any received TIS-B management message shall be reported directly to the client applications. The information content reported shall be the same as the information content received.	CAR Part 91 Appendix A, A.22.	No Difference

Chapter 5 Reference 5.2.3.5.2.1 Standard	5.2.3.5.2 <i>Non-precision local time reference</i> 5.2.3.5.2.1 For receiving systems not intended to generate ADS-B and/or TIS-B reports based on reception of ADS-B or TIS-B messages meeting the NUC or NIC criteria as indicated in 5.2.3.5.1, a non-precision time source shall be allowed. In such cases, where there is no appropriate precision time source available, the receiving system shall establish an appropriate internal clock or counter having a maximum clock cycle or count time of 20 milliseconds. The established cycle or clock count shall have a minimum range of 300 seconds and a resolution of 0.0078125 (1/128) seconds. <i>Note.— The use of a non-precision time reference as described above is intended to allow the report time of applicability to accurately reflect the time intervals applicable to reports within a sequence. For example the applicable time interval between state vector reports could be accurately determined by a client application, even though the absolute time (e.g. UTC measured time) would not be indicated by the report.</i>	CAR Part 91 Appendix A, A.22; CAR 171.53(a)(1).	No Difference		
Chapter 5 Reference 5.2.3.6.1 Standard	5.2.3.6 Reporting requirements 5.2.3.6.1 <i>Reporting requirements for Type I Mode S extended squitter airborne receiving systems.</i> As a minimum, the report assembler function associated with Type I Mode S extended squitter receiving systems, as defined in 5.2.3, shall support that subset of ADS-B and TIS-B reports and report parameters, that are required by the specific client applications being served by that receiving system.	CAR Part 91 Appendix A, A.22.	No Difference

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 5 Reference 5.2.3.6.2 Standard	5.2.3.6.2 <i>Reporting requirements for Type II Mode S extended squitter airborne receiving systems.</i> The report assembler function associated with Type II receiving systems, as defined in 5.2.3, shall generate ADS-B and TIS-B reports according to the class of the receiving system as shown in Table 5-4 when the prerequisite ADS-B and/or TIS-B messages are being received.	CAR Part 91 Appendix A, A.22.	No Difference		
Chapter 5 Reference 5.2.3.6.3 Standard	5.2.3.6.3 <i>Reporting requirements for Mode S extended squitter ground receiving systems.</i> As a minimum, the report assembler function associated with Mode S extended squitter ground receiving systems, as defined in 5.2.3, shall support that subset of ADS-B reports and report parameters, that are required by the specific client applications being served by that receiving system.	CAR 171.53(a)(1).	No Difference		
Chapter 5 Reference 5.2.4 Standard	5.2.4 Interoperability The Mode S extended squitter receiving system shall provide interoperability between the different versions of extended squitter ADS-B message formats. <i>Note 1.— All defined ADS-B versions and their corresponding message formats are contained in the Technical Provisions for Mode S Services and Extended Squitter (Doc 9871) and are identified by a version number.</i> <i>Note 2.— ADS-B message formats are defined with backward compatibility with previous versions. An extended squitter receiver can recognize and decode signals of its own version, as well as the message formats from lower versions. The receiver, however, can decode the portion of messages received from a higher version transponder according to its own capability.</i>	CAR Part 91 Appendix A, A.22; CAR 171.53(a)(1).	No Difference

Chapter 6 Reference Definition	CHAPTER 6. MULTILATERATION SYSTEMS <i>Note 1.— Multilateration (MLAT) systems use the time difference of arrival (TDOA) of the transmissions of an SSR transponder (or the extended squitter transmissions of a non-transponder device) between several ground receivers to determine the position of the aircraft (or ground vehicle). A multilateration system can be:</i> <i>a) passive, using transponder replies to other interrogations or spontaneous squitter transmissions;</i> <i>b) active, in which case the system itself interrogates aircraft in the coverage area; or</i> <i>c) a combination of a) and b).</i> <i>Note 2.— Detailed technical guidance for MLAT and WAM can be found in the Aeronautical Surveillance Manual (Doc 9924), Appendix L. Material contained in EUROCAE ED-117A – MOPS for Mode S Multilateration Systems for Use in A-SMGCS and ED-142 – Technical Specifications for Wide Area Multilateration System (WAM) provides information for planning, implementation and satisfactory operation of MLAT systems for most applications.</i> 6.1 DEFINITIONS Multilateration (MLAT) System. A group of equipment configured to provide position derived from the secondary surveillance radar (SSR) transponder signals	CAR 171.53(a)(1).	No Difference

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 6 Reference 6.2.2 Standard	6.2.2 An MLAT system used for air traffic surveillance shall be capable of determining aircraft position and identity. <i>Note 1.— Depending on the application, either two- or three-dimensional position of the aircraft may be required.</i> <i>Note 2.— Aircraft identity may be determined from:</i> <i>a) Mode A code contained in Mode A or Mode S replies; or</i> <i>b) Aircraft identification contained in Mode S replies or extended squitter identity and category message.</i> <i>Note 3.— Other aircraft information can be obtained by analysing transmissions of opportunity (i.e. squitters or replies to other ground interrogations) or by direct interrogation by the MLAT system.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 6 Reference 6.2.3 Standard	6.2.3 Where an MLAT system is equipped to decode additional position information contained in transmissions, it shall report such information separately from the aircraft position calculated based on TDOA.	CAR 171.53(a)(1).	No Difference		

Report on entire Annex

Annex Reference	AERONAUTICAL TELECOMMUNICATIONS Standard or Recommended Practice	State Legislation, Regulation or Document Reference	Level of implementation of SARP's	Text of the difference to be notified to ICAO	Comments including the reason for the difference
Chapter 6 Reference 6.3.1 Standard	6.3 PROTECTION OF THE RADIO FREQUENCY ENVIRONMENT <i>Note.— This section only applies to active MLAT systems.</i> 6.3.1 In order to minimize system interferences the effective radiated power of active interrogators shall be reduced to the lowest value consistent with the operationally required range of each individual interrogator site. <i>Note.— Guidance material on power consideration is contained in the Aeronautical Surveillance Manual (Doc 9924).</i>	CAR 171.53(a)(1).	No Difference		
Chapter 6 Reference 6.3.2 Standard	6.3.2 An active MLAT system shall not use active interrogations to obtain information that can be obtained by passive reception within each required update period. <i>Note.— Transponder occupancy will be increased by the use of omnidirectional antennas. It is particularly significant for Mode S selective interrogations because of their higher transmission rate. All Mode S transponders will be occupied decoding each selective interrogation not just the addressed transponder.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 6 Reference 6.3.3 Standard	6.3.3 An active MLAT system consisting of a set of transmitters shall be considered as a single Mode S interrogator.	CAR 171.53(a)(1).	No Difference

Chapter 6 Reference 6.3.4 Standard	6.3.4 The set of transmitters used by all active MLAT systems in any part of the airspace shall not cause any transponder to be impacted such that its occupancy, because of the aggregate of all MLAT 1 030 MHz interrogations, is greater than 2 per cent at any time. <i>Note 1.— This represents a minimum requirement. Some regions may impose stricter requirements.</i> <i>Note 2.— For an MLAT system using only Mode S interrogations, 2 per cent is equivalent to no more than 400 Mode S interrogations per second received by any aircraft from all systems using MLAT technology.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 6 Reference 6.3.5 Standard	6.3.5 Active MLAT systems shall not use Mode S All-Call interrogations. <i>Note.— Mode S aircraft can be acquired by the reception of acquisition squitter or extended squitter even in airspace where there are no active interrogators.</i>	CAR 171.53(a)(1).	No Difference		
Chapter 6 Reference 6.4.1 Standard	6.4 PERFORMANCE REQUIREMENTS 6.4.1 The performance characteristics of the MLAT system used for air traffic surveillance shall be such that the intended operational service(s) can be satisfactorily supported.	CAR 171.53(a)(1).	No Difference
